**Nonimaging Optics** Roland Winston, Lun Jiang, Vladimir Olier, 2020-10-07 This book provides a comprehensive look at the science methods designs and limitations of nonimaging optics It begins with an in depth discussion on thermodynamically efficient optical designs and how they improve the performance and cost effectiveness of solar concentrating and illumination systems It then moves into limits to concentration imaging devices and their limitations and the theory of furnaces and its applications to optical design Numerous design methods are discussed in detail followed by chapters of estimating the performance of a nonimaging design and pushing their limits of concentration Exercises and worked examples are included throughout

**Multisensor Data Fusion and Machine Learning for Environmental Remote Sensing** Ni-Bin Chang, Kaixu Bai, 2018-02-21 In the last few years the scientific community has realized that obtaining a better understanding of interactions between natural systems and the man made environment across different scales demands more research efforts in remote sensing An integrated Earth system observatory that merges surface based air borne space borne and even

underground sensors with comprehensive and predictive capabilities indicates promise for revolutionizing the study of global water energy and carbon cycles as well as land use and land cover changes The aim of this book is to present a suite of relevant concepts tools and methods of integrated multisensor data fusion and machine learning technologies to promote environmental sustainability The process of machine learning for intelligent feature extraction consists of regular deep and fast learning algorithms The niche for integrating data fusion and machine learning for remote sensing rests upon the creation of a new scientific architecture in remote sensing science that is designed to support numerical as well as symbolic feature extraction managed by several cognitively oriented machine learning tasks at finer scales By grouping a suite of satellites with similar nature in platform design data merging may come to help for cloudy pixel reconstruction over the space domain or concatenation of time series images over the time domain or even both simultaneously Organized in 5 parts from Fundamental Principles of Remote Sensing Feature Extraction for Remote Sensing Image and Data Fusion for Remote Sensing Integrated Data Merging Data Reconstruction Data Fusion and Machine Learning to Remote Sensing for Environmental Decision Analysis the book will be a useful reference for graduate students academic scholars and working professionals who are involved in the study of Earth systems and the environment for a sustainable future The new knowledge in this book can be applied successfully in many areas of environmental science and engineering
