

# How Do Domain Names Work?

- 1 When a user enters a domain name in a browser, the server will search through a global server network that makes up the Domain Name System (DNS).
- 2 The request is made for one DNS server and if the address is not found there, it moves to the other.
- 3 The DNS server that has information about the IP address will return it to the browser.
- 4 The browser will request data about the site from the domain's hosting server. Once the hosting server sends the data back, the web browser will convert it into a web page.
