computation language and is written for all MATLAB users regardless of their discipline or fields of interest All the built in mathematical graphic and system based commands available in MATLAB 5.1 are detailed herein Overall Organization One of the main premises of The MATLAB Handbook is that most MATLAB users approach the system to solve a particular problem or set of problems in a specific subject area Therefore all commands are organized in logical subsets that reflect these different categories e.g linear equations ordinary differential equations surface and volume graphics etc and the commands within a subset are explained in a similar language creating a tool that allows you quick and confident access to the information necessary to complete the problem you have brought to the system In addition because there is much information about MATLAB that is very difficult to express on a purely command by command basis each subject is prefaced with an introductory section Here detailed examples are given profiling some of the most common applications of the commands in that particular section There is also an introductory session titled MATLAB Quick Start which is intended to get those readers not already familiar with MATLAB off to a flying start The Student Edition of MATLAB Duane Hanselman, Bruce Littlefield, MathWorks (inc.), 1997 **MATLAB Notebook User's Guide.
