

Fetal Pig Dissection – Lab Guideline

In your lab notebook, you may cut and paste images to be identified and labeled. You must write your pre-lab for homework (do not worry about writing a hypothesis). You will use this as your guideline as you prepare for the fetal pig dissection. You will be quizzed on the procedure and the order that you will follow for the dissection next class period.

BACKGROUND

Mammals share many common characteristics. Body hair, mammary glands, and specialized teeth are external traits shared by most mammal species. Internal features shared by all mammal species include a diaphragm, a four-chambered heart, and similar digestive, respiratory, circulatory, excretory, and reproductive systems. By examining the external and internal anatomy of a fetal pig, you can learn about the common body traits shared by mammals. You will also study some unique anatomical features common to all developing placental mammals. In this laboratory you will observe and dissect a fetal pig and compare the fetal pig's anatomy with that of other vertebrates.

OBJECTIVES

- ✓ Examine the external anatomy of the fetal pig.
- ✓ Dissect the digestive, respiratory, circulatory, excretory, and reproductive systems of the fetal pig.
- ✓ Identify differences between the digestive, respiratory, circulatory, and excretory system of the fetal pig.
- ✓ Compare features of fetal pig anatomy with features of the anatomy of humans.
