

- ❑ frontal impacts against highly deformable objects not involving the front surface of the vehicle (e.g. wing collision against guard rail, etc.);
- ❑ vehicle wedging under other vehicles or protective barriers (e.g. trucks or guard rails);

Failure to activate in the conditions described above is due to the fact that they may not provide any additional protection compared with seat belts, so their activation would be inappropriate. In these cases, non-deployment does not indicate a system malfunction.

**WARNING**

*Do not apply stickers or other objects to the steering wheel, the dashboard in the passenger side airbag area and the seats. Never put objects (e.g. mobile phones) on the passenger side of the dashboard since they could interfere with correct inflation of the passenger airbag and also cause serious injury to the passengers.*

The driver's and passenger's front airbags have been designed and calibrated to protect front seat occupants wearing seat belts. At their maximum inflation, their volume fills most of the space between the steering wheel and the driver and between the dashboard and the passenger.

The airbags are not deployed in the event of minor frontal impacts (for which the restraining action

of the seat belts is sufficient). Seat belts must always be worn. In the event of frontal impacts they guarantee correct positioning of the passenger.

**FRONT AIRBAG DRIVER'S SIDE**

It consists of an instantly inflating bag contained in a special recess in the centre of the steering wheel fig. 118.

**PASSENGER SIDE FRONT AIRBAG**

(for versions/markets, where provided)

This consists of an instantly inflating bag contained in a special recess in the dashboard: fig. 119 this bag has a larger volume than that of the driver.
