Mobile Learning Structures Agency Practices:

Mobile Learning Norbert Pachler, Ben Bachmair, John Cook, 2009-12-15 As with television and computers before it today's mobile technology challenges educators to respond and ensure their work is relevant to students. What's changed is that this portable cross-contextual way of engaging with the world is driving a more proactive approach to learning on the part of young people. The first full-length authored treatment of the relationship between the centrality of technological development in daily life and its potential as a means of education. *Mobile Learning* charts the rapid emergence of new forms of mass communication and their potential for gathering, shaping, and analyzing information, studying their transformative capability, and learning potential in the contexts of school and socio-cultural change. The focus is on mobile cell phones, PDAs, and to a lesser extent, gaming devices and music players, not as the next new thing but meaningfully integrated into education without objectifying the devices or technology itself. And the book fully grounds readers by offering theoretical and conceptual models, an analytical framework for understanding the issues, recommendations for specialized resources, and practical examples of mobile learning in formal as well as informal educational settings, particularly with at-risk students. Among the topics covered: Core issues in mobile learning; Mobile devices as educational resources; Socioeconomic approaches to mobile learning; Creating situations that promote mobile learning; Ubiquitous mobility and its implications for pedagogy; Bridging the digital divide at the policy level. *Mobile Learning* is a groundbreaking volume sure to stimulate both discussion and innovation among educational professionals interested in technology in the context of teaching and learning. [Handbook of Mobile Learning](#) Zane L. Berge, Lin Muilenburg, 2013-06-19 Winner of the AECT Division of Distance Learning DDL Distance Education Book Award. This handbook provides a comprehensive compendium of research in all aspects of mobile learning, one of the most significant ongoing global developments in the entire field of education. Rather than focus on specific technologies, expert authors discuss how best to utilize technology in the service of improving teaching and learning. For more than a decade, researchers and practitioners have been exploring this area of study as the growing popularity of smartphones, tablets, and other such devices, as well as the increasingly sophisticated applications for these devices, has allowed educators to accommodate and support an increasingly mobile society. This handbook provides the first authoritative account of the theory and research that underlies mobile learning while also exemplifying models of current and future practice. [Theorising and Implementing Mobile Learning](#) Matthew Kearney, Kevin Burden, Sandy Schuck, 2020-10-19 This book focuses on teaching and learning with mobile technologies with a particular emphasis on school and teacher education contexts. It explains a robust, highly acclaimed contemporary mobile pedagogical framework, iPAC, that focuses on three distinct mobile pedagogies: personalisation, authenticity, and collaboration. The book shows how mobile pedagogical practice can benefit from use of this framework. It offers numerous cutting-edge research resources and examples that supplement theoretical discussions. It considers directions for future research and practice. Readers will gain insights into the potential of

Science, Learning, Identity Wolff-Michael Roth, Kenneth George Tobin,2007

Over the recent years identity has become one of the most central theoretical concept and topics of scholarship in a number of disciplines including science education In this volume leading science educators articulate in carefully prepared case studies their theoretical perspective on science learning and identity More importantly the authors of the chapters that in the different parts of the book engage each other in a collaboratively written chapter concerning some of the central issues that have arisen from their individual studies and in particular they engage each other over the similarities and differences between their approaches This book which features detailed case studies of identity as both resource and outcomes of learners in a variety of settings will be of interest to anyone concerned with learning science in and out of schools The book also caters for readers who have wondered about how identity mediates science learning and simultaneously how engagement in science related tasks and activities mediates the emergence and development of identities The general tenor of all chapters is a cultural historical and sociocultural framework that is brought to issues of identity thereby inherently transcending the individual person and linking identity to cultural possibilities
