Mobile Social Networking and Computing Yufeng Wang, Jianhua Ma, 2014-09-05 Recent advancements in mobile device technologies are revolutionizing how we socialize interact and connect By connecting the virtual community with the local environment mobile social networks MSNs create the opportunity for a multitude of new personalized services for mobile users Along with that comes the need for new paradigms mechanisms and techniques with the capacity to

autonomously manage their functioning and evolution. Currently most books about mobile networks focus mainly on the technical point of view. *Mobile Social Networking and Computing: A Multidisciplinary Integrated Perspective* not only addresses the theoretical aspects of MSN and computing but also introduces and categorizes existing applications. It supplies a multidisciplinary perspective that considers the technology, economics, social sciences, and psychology behind MSNs. In addition to fundamental theory, the book investigates the practical issues in MSN, including characteristics, inner structural relationship, incentive mechanisms, resource allocating, information diffusion, search, ranking, privacy, trust, and reputation. Introducing recently developed technologies, modes, and models, the book provides two distinct but related viewpoints about MSN applications: socially inspired networking technology and networking technology that uses recent advancements to enhance quality of life. The text illustrates the interaction between the macrolevel structure and the local rational behaviors at the microlevel in MSN. It summarizes currently available MSN development platforms, including Android and iOS, and introduces and categorizes existing applications related to MSN and computing. Both location-based service (LBS) and mobile social networks in proximity (MSNPs) are presented in a comprehensive manner. Highlighting key research opportunities, this much-needed reference outlines incentive mechanisms inspired by classical economics, behavioral economics, and social psychology and perhaps for the first time it presents a summary of the economic and business models of MSNs. *Opportunistic Mobile Social Networks* Jie Wu, Yunsheng Wang, 2014-08-05. The widespread availability of mobile devices along with recent advancements in networking capabilities make opportunistic mobile social networks (MSNs) one of the most promising technologies for next-generation mobile applications. *Opportunistic Mobile Social Networks* supplies a new perspective of these networks that can help you enhance spontaneous [Social Computing: Concepts, Methodologies, Tools, and Applications](#) Dasgupta, Subhasish, 2009-11-30. Uncovers the growing and expanding phenomenon of human behavior, social constructs, and communication in online environments. *Handbook of Social Network Technologies and Applications* Borko Furht, 2010-11-04. Social networking is a concept that has existed for a long time; however, with the explosion of the Internet, social networking has become a tool for people to connect and communicate in ways that were impossible in the past. The recent development of Web 2.0 has provided many new applications, such as Myspace, Facebook, and LinkedIn. The purpose of *Handbook of Social Network Technologies and Applications* is to provide comprehensive guidelines on the current and future trends in social network technologies and applications in the field of Web-based Social Networks. This handbook includes contributions from world experts in the field of social networks from both academia and private industry. A number of crucial topics are covered, including Web and software technologies and communication technologies for social networks, Web mining techniques, visualization techniques, intelligent social networks, Semantic Web, and many other topics. Standards for social networks, case studies, and a variety of applications are covered as well. *Integrating Psychoinformatics with Ubiquitous Social Networking* Felix Beierle, 2021-04-23. This book deepens the understanding of people through smartphone

Unlike conventional centralised social networks that rely upon a central authority to organise the opinions of each member of the social network and protect their personal information members of a decentralised network are completely autonomous and responsible for their own individual behaviour When people meet for the first time they thus need help to determine if they can trust each other This book presents BlueTrust a trust model for use in decentralised mobile social networks BlueTrust focuses on establishing trust between users in close proximity by computing trust levels to support user interaction
