conflicts and challenges that may arise during multidisciplinary research in areas such as Industry 4.0, Internet of Things, modern machine learning, software agent applications and data science. The book focuses on the various fields in which intelligent systems play a critical role in enabling the development of advanced technologies that can perform tasks that would typically require human intelligence. For example, in smart control systems, intelligent algorithms can be used to optimize the performance of machines and devices, while in cyber security, they can be used to protect networks and data from cyber attacks. In bioinformatics, intelligent systems can be used to analyse large amounts of biological data, while in virtual reality and robotics, they can be used to create realistic and responsive simulations and automatons. Additionally, the book also highlights the rapidly advancing theoretical foundations of fuzzy sets, mathematical logic and non-classical logic. These are important theoretical frameworks for the development of intelligent systems as they provide the foundation for the representation and manipulation of uncertainty, complexity and imprecision. These theoretical foundations are essential in the development of intelligent systems that can make decisions and perform tasks in uncertain, complex and dynamic environments.

This is an open access book. In this Industrial Era 4.0 society encounters significant environmental, economic and social challenges. Thus, educational institutions need to ensure that all students are well prepared for the future and that they can act as agents of change. As a result, educational institutions must expand their educational system extensively to address these challenges, including reshaping teaching and learning notions and platforms that immensely focus on not only developing a broad set of academic staff and students' knowledge, skills, attitudes and values, but also upholding the fast-growing technology. Building strong learning connections should be perceived as the highest priority in educational institutions. The connection paves the way for critical thinking and it is a fundamental concept that connects both context and relevance. In this digital information age, technology has enormous potential to assist this whole process of connection. The 5th International Conference of Current Issues in Education (ICCIE) 2023 provides platforms for researchers and practitioners to share their ideas and experiences concerning these issues. The conference also brings an excellent opportunity to connect with global participants and enhance further collaborations.

School, apart from being a place of education and transmission of new knowledge, should also be a place of personal development and enhancement of students' well-being and mental resilience while protecting mental health and preventing teacher burnout. The current COVID-19 pandemic has made the need for psychological support for students and teachers more urgent than ever.

The science of positive psychology has offered many tools and methods that are particularly effective in the school environment and in educational contexts in general. New tools, methods, and practices are needed to enhance the well-being and psychological resilience of students, teachers, and parents in a time of challenges such as the current pandemic and inflation that cause stress, uncertainty, and an increase in psychopathology. **Public health policy and health communication challenges in the COVID-19 pandemic and infodemic** Zhiwen Hu, Chuhan Wu, Pier Luigi Sacco, 2023-08-31
