

Lesson 4.12a: Trigonometric Applications (Extension Handout)

1. A weight is supported by a spring. The weight is pulled down and released. This creates a periodic up and down motion that can be modeled by the following graph.

- How far is the weight pulled down?
- How long does it take for the weight to return to the low position?
- What is the height of the weight after 3 s?
- Determine one of the times when the height of the weight is 60 cm.
- Identify and explain the restrictions on the domain and range in this context.
- How would the graph change if the resting place of the weight were 20 cm greater?
- How would the graph change if the weight were pulled down 10 cm further?
- How would the graph change if it took longer for the weight to return to the lowest position each time?

2. For a certain day, the depth of water h , in metres, at a seaport in British Columbia at time t , in hours,

is given by the formula $h = 3.5 \sin \frac{-\pi}{6.2}(t - 3) + 7.8$, where $0 \leq t \leq 24$.

- Determine the period and amplitude of the graph and explain the practical significance of these quantities.
- Calculate the depth of the water at 9:30 and 12:00 on this particular day.
- At what times during the day does the low tide occur?
- Determine the times when there will be at least 6 m of water in the harbour.
- Identify and explain the restrictions on the domain and range in this context.

3. The table shows an individual's blood pressure in millimeters of mercury.

Time (s)	0	0.25	0.5	0.75	1	1.25	1.5	1.75	2
Blood Pressure (mm)	100	120	100	80	100	120	100	80	100

- Determine the period and amplitude of the graph and explain the practical significance of these quantities.
- Identify and explain the restrictions on the domain and range in this context.

4. A small windmill has its centre 6 m above the ground and blades 2 m in length.

In a steady wind, a point P at the tip of one blade makes a complete rotation in 12 s.

- If the rotation begins at the highest possible point, graph the function that gives the height of point P above the ground at a time t .
- What is the height of point P at 5 s and 40 s?
- At what time is P exactly 7 m above the ground?
- Determine the period and amplitude of the graph and explain the practical significance of these quantities.
- Identify and explain the restrictions on the domain and range in this context.
