

Chapter Notes: Gravitation

What is Gravitation?

Gravitation is the universal phenomenon where every object in the universe attracts every other object. This attractive force between any two objects is referred to as the "force of gravitation." Although the gravitational force is weak and typically requires substantial masses to be observed, it acts over long distances.

Gravitation

Gravitation is the Force of Attraction Acting Between Any Two Bodies of the Universe.

Gravity

Gravitation is the Earth's Gravitational Pull on a Body, Lying on Near the Surface of Earth.

Gravitation and Gravity

Centripetal Force

Centripetal force is like glue that keeps things moving in a circle. Imagine a merry-go-round: as it spins faster, it's harder to hold on. This force pulls things towards the center to keep them in the circular path. It balances with another force, making things stay put.
