

Memorandum

Dated: 14 January 2023

To: Sales & Marketing Group

From: Praveenkumar Revankar, Product Engineering

Subject: Delay in release timelines of Feature A and Feature B.

Purpose:

The purpose of this document is to notify the cross-functional group about sudden changes in release timelines of Feature A and Feature B and to reinform the group to reprioritize certain tasks for Sales and Marketing for the release.

Background/Context:

We have been working together on our key USP features 'Feature A' and 'Feature B' for targeting their release this quarter. Due to unforeseen circumstances, there is a change in the release timelines and the new timeline will be shared shortly in Scrum of Scrum meeting where a representative from Sales has been invited.

Action:

Even though it looks like a major setback and current activities w.r.t. The release can be paused, there are certain actions that have to be performed in this quarter. The same has been conveyed in Jira, marking the work items with labels "Q1_Paused" and "Q1_Must." Please reprioritize your internal activities based on the labels in Jira and ensure a final plan reflected in Jira on or before 30 January 2023.

Conclusion:

We might be delayed with the release but we are not affecting the business. The necessary strategy is defined and put in place to ensure customers can solve their problems using our support until Feature A and Feature B release.

Thanks,
Praveenkumar Revankar

Office of the Assistant Secretary of the Army (Civil Works),2015 *China's Bilateral Relations with Its Principal Oil Suppliers* George G. Eberling,2017-10-23 This book examines China s bilateral relations with its established suppliers of crude petroleum and on occasion petroleum gas products including liquefied natural gas LNG based on a five dimensional framework political diplomatic relations economic trade relations military security relations cultural relations and petroleum energy relations A five dimensional approach is comprehensive in nature and offers a complete understanding of China s complex relationships rather than looking solely on more typical perspectives like bilateral trade security relationships or energy ties More often than not social science literature focuses on one or more aspects of China s bilateral relations which does not provide a complete picture of the complex nature of its interstate ties This book endeavors to bridge this gap and look more substantially at China s bilateral relationships with energy petroleum relations being the key aspect linking each one of them The specific bilateral relationships examined are China s relations with Angola Brazil Republic of the Congo Iran Iraq Kazakhstan Kuwait Oman Russia Saudi Arabia South Sudan Sudan United Arab Emirates and Venezuela These countries matter because their crude petroleum and petroleum gas product exports account for over 50 percent of China s annual oil consumption *Operational Safety Economics* Genserik L. Mills,2021-11-02 The conventional wisdom on how technology will change the future is wrong Mark Mills lays out a radically different and optimistic vision for what s really coming The mainstream forecasts fall into three camps One considers today as the new normal where ordering a ride or food on a smartphone or trading in bitcoins is as good as it s going to get Another foresees a dystopian era of widespread digitally driven job and business destruction A third believes that the only technological revolution that matters will be found with renewable energy and electric cars But according to Mills a convergence of technologies will instead drive an economic boom over the coming decade one that historians will characterize as the Roaring 2020s It will come not from any single big invention but from the confluence of radical advances in three primary technology domains microprocessors materials and machines Microprocessors are increasingly embedded in everything Materials from which everything is built are emerging with novel almost magical capabilities And machines which make and move all manner of stuff are undergoing a complementary transformation Accelerating and enabling all of this is the Cloud history s biggest infrastructure which is itself based on the building blocks of next generation microprocessors and artificial intelligence We ve seen this pattern before The technological revolution that drove the great economic expansion of the twentieth century can be traced to a similar confluence one that was first visible in the 1920s a new information infrastructure telephony new machines cars and power plants and new materials plastics and pharmaceuticals Single inventions don t drive great long cycle booms It always

takes convergent revolutions in technology's three core spheres: information, materials, and machines. Over history that's only happened a few times. We have wrung much magic from the technologies that fueled the last long boom. But the great convergence now underway will ignite the 2020s. And this time, unlike any previous historical epoch, we have the Cloud amplifying everything. The next long boom starts now.

Universities and the Purpose of Higher Education Josh Patel, 2026-01-22. This thought-provoking book addresses the persistent anxieties surrounding the purpose and direction of higher education, offering a nuanced historical perspective on its transformation. Using Cold War Britain as a lens, this book challenges the prevailing narrative that marketisation was an external imposition, revealing instead how the dynamic priorities of social democratic higher education inadvertently paved the way for their own supersession. Drawing on novel archival insights, it explores experimental initiatives by university leaders and employers and reveals how post-war public investment in universities was justified through a dual logic: empowering young people to pursue their individual self-interest while cultivating the ethical application of specialist knowledge in service of liberal capitalism. It goes on to show how the novel accountability frameworks they constructed intended to maximise freedom, contained unstable tensions that remain in today's neoliberal system. Packed full of research, case studies, and policy implications, this book interrogates the successes and failures of innovative teaching and learning practices, as well as the evolving relationship between universities and industry. Throughout, the author offers critical insights into how liberal education might be reimagined to sustain universities in their service to the common good. This is essential reading for students, academics, policymakers, and anyone seeking to understand the moral principles underpinning higher education and their influence on its future.
