**Proceedings of the International Conference on Computer Science, Electronics and Industrial Engineering (CSEI 2023)** Marcelo V. Garcia, Carlos Gordón-Gallegos, Asier Salazar-Ramírez, Carlos Nuñez, 2024-12-22 This volume serves as both a record of current knowledge and a testament to the ongoing commitment to excellence in research within these fields It stands as an invaluable resource for researchers practitioners and students who are seeking to expand their understanding and engage with the forefront of technological innovation This book is an essential resource for researchers practitioners and students offering insights and guidance for future innovations in computing technologies

Representative Volume Elements and Unit Cells Shuguang Li, Elena Sitnikova, 2019-11-19 Numerical methods to estimate material properties usually involve analysis of a representative volume element RVE or unit cell UC The representative volume element RVE or unit cell UC is the smallest volume over which a measurement can be made that will yield a value representative of the whole RVEs and UCs are widely used in the characterisation of materials with multiscale architectures such as composites However finite element FE software packages such as Abaqus and Comsol MultiPhysics do not offer the capability for RVE and UC modelling directly on their own To apply them to analyse RVEs and UCs the generation of the FE models for them the imposition of boundary conditions and the extraction of directly relevant results are essentially the responsibility of the user These have tended to be incorrectly implemented by users For the first time this book will provide a comprehensive account on correct modelling of RVEs and UCs which will eliminate any uncertainties and ambiguities The book offers a complete and thorough review on the subject of RVEs and UCs establishing a framework on a rigorous mathematical and mechanical basis to ensure that basic concepts such as symmetry and free body diagrams are applied correctly and consistently It also demonstrates to readers that rigorous applications of mathematics and mechanics are meant to make things clear consistent thorough and most of all simple and easy to follow rather than the opposite as many perceive As a result the book shows that the appropriate use of RVEs and UCs can deliver an effective and reliable means of material characterisation It not only provides a much needed comprehensive account on material characterisation but more importantly explains how such characterisation can be conducted in a consistent and systematic manner It also includes a ready to use open source code for UCs that can be downloaded from a companion site for potential users to utilise adapt and expand as they wish The companion site for the book can be found at <https://www.elsevier.com/books-and-journals/book-companion/9780081026380> The theories presented in this book will give users more confidence when applying RVE and UC models to analyse materials of complex architectures with accuracy and efficiency Systematic explanations of RVE and UC theories have been included as well as their applications in composites It illustrates in detail how to set up UC models and provides an open source code to implement via Abaqus *Fundamentals of RCS Prediction Methodology using Parallelized Numerical Electromagnetics Code (NEC) and Finite Element Pre-processor* Vineetha Joy, G. L. Rajeshwari, Hema

Singh, Raveendranath U. Nair, 2020-09-12 This book presents a novel methodology for the computation of RCS of metallic structures using a parallelized version of NEC in conjunction with a finite element preprocessor which has been strategically incorporated for simplifying geometry modelling catering to NEC guidelines It includes a thorough overview of the theoretical background of NEC including all relevant aspects of formulation and modelling The revised methodology including all the required steps and details is discussed elaborately along with case studies and validations This book will serve as a valuable resource for students researchers scientists and engineers working in the field of RCS predictions and measurements Proceedings of the 1st International Conference on New Materials, Machinery and Vehicle Engineering

Jinyang Xu, Yukui Cai, Mohamed El Mansori, 2022-05-15 New materials are constantly being developed which may improve or transform many aspects of our lives and nowhere is this more exciting than in the fields of vehicle and machinery technology This book presents the proceedings of the 2022 International Conference on New Materials Machinery and Vehicle Engineering NMMVE 2022 held as a virtual event due to the COVID 19 pandemic and travel restrictions from 18 20 March 2022 NMMVE 2022 provides an international forum for researchers and engineers to present and discuss recent advances new techniques and applications in the fields of new materials machinery and vehicle engineering and attracts academics scientists engineers postgraduates and other professionals from a wide range of universities and institutions A total of 121 submissions were received from which 48 were accepted for inclusion in the conference and proceeding after a rigorous standard single blind reviewing process The papers are grouped into 3 sections machinery 30 papers new materials 11 papers and vehicle engineering 7 papers Providing an overview of the latest developments in these fields the book will be of interest to all those wishing to know more about new materials and machine and vehicle engineering **Sheet Metal**

**Forming** Taylan Altan, A. Erman Tekkaya, 2012 Description del editor heet forming fundamentals are thoroughly addressed in this comprehensive reference for the practical and efficient use of sheet forming technologies The principle variables of sheet forming including the interactions between variables are clearly explained as a basic foundation for the most effective use of computer aided modeling in process and die design Topics include stress analysis formability criteria tooling and materials for sheet forming The book also covers the latest developments in sheet metal forming technology including servo drive presses and their applications and advanced cushion systems in mechanical and hydraulic presses ASM International

**Customized Artificial Implants: Bionic Design and Multiscale Evaluation** Zhenxian Chen, Yongtao Lyu, Junyan Li, Xijin Hua, 2024-05-24 Artificial implants have been commonly used to replace or fix damaged tissue in orthopedics However due to the inter individual differences and the complexities of anatomical structures and load conditions traditional implants cannot meet the clinical requirements In recent years questions relating to customized artificial implants have been getting more and more attention from the research community Challenges to implementing precision design and evaluation arise not only from the design need of considering bionic structures kinematical function mechanical performances and

biological functional similarity but also from the multiscale comprehensive evaluation the latter involves biomechanics and biotribology of musculoskeletal systems from macro musculoskeletal multibody dynamics to micromechanics of porous structures Established analysis technologies such as musculoskeletal multibody dynamics modeling and neuromusculoskeletal modeling are being well developed and evolved through combining coupling with finite element analyses and more recently by novel artificial intelligence approaches
