Data Requirement Descriptions Index: Index of Technical and Management Information Specifications for Use on NASA Programs United States. National Aeronautics and Space Administration, **Observation of CP Violation in $B_{\pm} \rightarrow DK_{\pm}$**

Decays Paolo Gandini,2013-09-05 CP violation is a well established phenomenon in particle physics but until 2001 it was only observed in kaons In the last decade several matter antimatter asymmetries have been observed in neutral B mesons in line with the expectations of the Standard Model of the weak interaction Direct CP violation is also expected in the decay rates of charged B mesons versus that of B mesons though the greatest effects are present in a decay that occurs just twice in 10 million decays Such rarity requires huge samples to study and this is exactly what the LHC and its dedicated B physics experiment LHCb provide This thesis presents an analysis of the first two years of LHCb data The author describes the first observation of the rare decay $B \rightarrow DK$ and the first observation of direct CP violation in this B decay The work constitutes essential information on the experiment's measurement of a fundamental parameter of the theory and stands as a benchmark against which subsequent analyses of this type will be compared
