Hydrologic Cycle

Reading Passage

Read the passage carefully before answering the questions that follow.

The Hydrologic Cycle is a Natural Process

The hydrologic cycle is a continuous process that moves water between the atmosphere, land, and oceans. It is a natural process that has been occurring since the beginning of time. The cycle is driven by the sun, which provides the energy for evaporation. Water evaporates from the oceans, lakes, and rivers, and from plants and animals. The water vapor then rises into the atmosphere, where it cools and condenses into clouds. The clouds release the water as precipitation in the form of rain or snow. The water then falls to the ground, where it can infiltrate the soil and become groundwater, or it can flow over the surface of the land and into the oceans.

Select the Correct Answer

- It is a natural process.
- It is a man-made process.
