WARNING

The lift truck must be put on blocks for some types of maintenance and repair. The removal of the following assemblies will cause large changes in the center of gravity: mast, drive axle, engine and transmission, and counterweight. When the lift truck is put on blocks, put additional blocks in the following positions to maintain stability:

- Before removing the mast and drive axle, put blocks under the counterweight so the lift truck cannot fall backward.
- Before removing the counterweight, put blocks under the mast assembly so the lift truck cannot fall forward.

Description

The frame is one weldment and includes the hydraulic tank and the fuel tank for gasoline or diesel fuel.

There is a counterweight for each capacity of lift truck. The counterweights are similar, but are different weights. The muffler is fastened to the frame inside the counterweight.

The surface must be solid, even, and level when the lift truck is put on blocks. Make sure that any blocks used to support the lift truck are solid, one-piece units. See the Operating Manual or Periodic Maintenance 8000 SRM 707.

This section has the description of the frame and some connected parts. See Figure 1. Procedures for the removal and installation of the counterweight, hood, overhead guard, and engine (including the transmission) are found in this section. Checks for the operator restraint system and procedures for the repair of tanks and installation of safety labels are also included.

An operator module is installed on the frame with rubber mounts. The overhead guard, steering controls, instrument panel, hood, and seat are installed on the operator module.

The hood is connected to the operator module with hinges. Two gas-controlled springs give assistance when raising the hood and hold the hood in the open position. The floor plates and side covers can be removed for access to the engine, transmission, and other components.

Operator Module Repair

REMOVE

1. Remove the hood and side covers. See Figure 1.
2. Remove the steering housing and instrument cluster from the cowl. Remove the capscrews that hold the parking brake lever to the cowl.
3. Remove the crossmember that is the mount for the hood.
4. Remove the nuts and bolts at the mounts for the operator module.
5. Connect a lifting device to the overhead guard. The overhead guard and module weigh approximately 385 kg (850 lb). Lift the operator module from the frame.

INSTALL

NOTE: If the overhead guard was removed from the operator module, tighten the rear leg mount capscrews to 53 N•m (39 lbf ft). On H2.00-3.20XM (H45-65XM) units, tighten the capscrews that fasten the module cowl side plate to the front legs to 66 N•m (49 lbf ft).

1. Connect a lifting device to the overhead guard. The overhead guard and module weigh approximately 385 kg (850 lb). Lift the operator module onto the frame.
2. Make sure the rubber mounts are installed in the frame. Install the large washer and nut on the
