CHAPTER 5: THE PERIODIC LAW

The following pages contain the bulk (but not all) of the information for the chapter 5 test. Focus on this content, but make sure to review class notes, activities, handouts, questions, etc. If you study this document and **NOTHING** else, you should at least be able to **PASS** the test. ***** Test items will be recall, examples, and/or application of this content. *****

OUTCOMES

- Collaborate with peer(s) to understand chemistry content (*C C*)
- Communicate chemistry content to teacher and peer(s) (*E C*)
- 5.1: Describe the organization of the modern Periodic table; distinguish between periods and groups (*T & R*)
- 5.2: Use the Periodic Table to obtain information about the properties (physical and chemical), ionization energy, and atomic sizes of the elements (*F & PK*)
- 5.2: Identify common non-metals, metalloids, and noble gases; identify the representative groups and name them (groups 1, 2, 13, 14, 15, 16, 17, 18) (*T & R*)
- 5.3: Compare periodic trends of atomic radii, ionization energy, and electronegativity (*T & R*)

5.1: HISTORY OF THE PERIODIC TABLE

- **Vocabulary**
 - **periodic law** -- the law that states that the repeating chemical and physical properties of elements change periodically with the atomic numbers of the elements
 - **periodic table** -- an arrangement of the elements in order of their atomic numbers such that elements with similar properties fall in the same column
 - **lanthanides** -- a member of the rare-earth series of elements, whose atomic numbers range from 58 (cerium) to 71 (lutetium)
 - **actinides** -- any of the series of heavy radioactive elements that extends from thorium (atomic number 90) through lawrencium (atomic number 103) on the periodic table
- **Chapter Highlights**
 - The periodic law states that the physical and chemical properties of the elements are periodic functions of their atomic numbers.
 - The periodic table is an arrangement of the elements in order of their atomic numbers so that elements with similar properties fall in the same column/group/family.
 - The columns in the periodic table are referred to as groups.

5.2: ELECTRON CONFIGURATION AND THE PERIODIC TABLE

- **Vocabulary**
 - **alkali metal** -- one of the elements of Group 1 of the periodic table (lithium, sodium, potassium, rubidium, cesium, and francium)
 - **alkaline-earth metal** -- one of the elements of Group 2 of the periodic table (beryllium, magnesium, calcium, strontium, barium, and radium)
 - **transition element** -- one of the metals that can use the inner shell before using the outer shell to bond
 - **main-group element** -- an element in the s-block or p-block of the periodic table
 - **halogen** -- one of the elements of Group 17 (fluorine, chlorine, bromine, iodine, and astatine); halogens combine with most metals to form salts
- **Chapter Highlights**
 - The rows in the periodic table are called periods.
 - Many chemical properties of the elements can be explained by the configurations of the elements' outermost (valence) electrons.
 - The noble gases exhibit unique chemical stability because their highest occupied levels have an octet (8) of electrons, $?s^2?p^6$ (with the exception of helium, whose stability arises from its highest occupied level being completely filled with two electrons, $1s^2$).

Gerwig,2021-10-23 The growing importance of glycobiology and carbohydrate chemistry in

modern biotechnology and the pharmaceutical industry makes accurate carbohydrate analysis indispensable. This book provides the principles and protocols of various fundamental carbohydrate analysis methods. Choice of method is entirely dependent upon the type of material being investigated (biological samples, food products, etc.) and the level of structural detail required (i.e., sugar content, compositional analysis, linkages between the sugar components, or the total chemical structure of a given molecule). Full structural characterization of carbohydrate chains requires significant time, resources, and skill in several methods of analysis; no single technique can address all glycan analysis needs. This book summarizes several existing analytical techniques, both chemical and physical, in an introductory volume designed for the non-expert researcher or novice scientist. While background in carbohydrate chemistry is assumed, all information necessary to understanding the described techniques is addressed in the text.
