[Analysis of Graphical User Interface Design in the Context of Human-computer Interaction \(with a Case Study on Oven Control Panel\)](#) Özlem İlhan,İzmir Yüksek Teknoloji Enstitüsü,2005 In this era that the popularity of digital products has risen computer and its tools affect every part of our lives New technologies provide extraordinary powers to

those people who master them Digital products and their graphical user interfaces are still new technologies that are being rapidly disseminated Human performance in the use of digital product will remain a rapidly expanding research and development topic in the coming decades For this reason the importance of interaction between digital product and user should be considered The term Graphical user interface is the layer where the digital product communicated with human and human communicated with digital product A well designed product can fail with an unsuccessful interface Conversely a product has not good design values can become successful with its well designed interface To get best interaction between digital product and user the graphical interface design itself has some rudimentary design values like user friendliness usability easy to learn etc At an individual level user interfaces change many people s lives For instance At an individual level user interfaces change many people s lives For instance and technicians can manipulate their job more safely Some changes however are disruptive too often users must cope with frustration fear and failure when they encounter excessive complexity incomprehensible terminology or chaotic layouts Designers are exploring how best to organize information graphically They are developing query languages and visually attractive facilities Techniques such as direct manipulation telepresence and virtual realities may change the ways that we interact with and think about digital products Consequently the goal of making the user s quality of life better is important to keep in mind In this research from the point of an industrial designer s view the subject matter Graphical user interface design and its all interaction rules with user are evaluated In terms of design language which has the ability of understand the user behavior it puts the subject matter on the agenda to explore recipe of a successful product
