This rigorous textbook introduces graduate students to the principles of econometrics and statistics with a focus on methods and applications in financial research. *Financial Econometrics Mathematics and Statistics* introduces tools and methods important for both finance and accounting that assist with asset pricing, corporate finance, options and futures, and conducting financial accounting research. Divided into four parts, the text begins with topics related to regression and financial econometrics. Subsequent sections describe time series analyses, the role of binomial, multinomial, and log normal distributions in option pricing models, and the application of statistics analyses to risk management. The real world applications and problems offer students a unique insight into such topics as heteroskedasticity, regression, simultaneous equation models, panel data analysis, time series analysis, and generalized method of moments. Written by leading academics in the quantitative finance field, allows readers to implement the principles behind financial econometrics and statistics through real world applications and problem sets. This textbook will appeal to a less served market of upper undergraduate and graduate students in finance, economics, and statistics. *Computational and Geometric Aspects of Modern Algebra* Michael D. Atkinson, Michael Atkinson, 2000-06-15. This book comprises a collection of papers from participants at the IMCS Workshop on Computational and Geometric Aspects of Modern Algebra held at Heriot Watt University in 1998. Written by leading researchers, the papers cover a wide range of topics in the vibrant areas of word problems in algebra and geometric group theory. This book represents a timely record of recent work and provides an indication of the key areas of future development.
