Radiation Carcinogenesis and DNA Alterations Frederic J. Burns, 2013-03-13 This volume is based on the proceedings of an Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO held October 1984 in Corfu Greece The meeting received financial support from the United States Department of Energy and the United States National Cancer Institute A plethora of recent developments in the molecular biology of DNA are leading to new ideas concerning how DNA alterations might be involved in the mechanism of radiation carcinogenesis Evidence is accumulating that genetic sequences known as oncogenes are involved in the translation of DNA molecular alterations into phenotypic changes associated with malignant cells For example a chromosome break often occurs at or near the location of a specific oncogene in Burkitt's lymphoma Such breaks could represent initial lesions in a translocation process that activates the oncogene by inserting it at a new location eg near an active promoter Since breakage of the DNA is one of the principal ways that ionizing radiation affects mammalian cells these new molecular ideas suggest ways that radiation induced DNA breaks might be involved as initial events in carcinogenesis While the possible involvement of oncogenes in radiation carcinogenesis is an exciting new development a direct sequential connection between early molecular changes in DNA and later tumor development has yet to be established Accordingly there is a tremendous need for experimental studies of how DNA alterations might convert normal cells to cancer cells Index Medicus, 2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings Molecular Biology Jordanka Zlatanova, 2023-04-21 Molecular Biology Structure and Dynamics of Genomes and Proteomes second edition illustrates the essential principles behind the transmission and expression of genetic information at the level of DNA RNA and proteins Emphasis is on the experimental basis of discovery and the most recent advances in the field while presenting a rigorous yet still concise summary of the structural mechanisms of molecular biology Topics new to this edition include the CRISPR Cas gene editing system Coronaviruses structure genome vaccine and drug development and newly recognized mechanisms for transcription termination The text is written for advanced undergraduate or graduate level courses in molecular biology Key Features Highlights the experimental basis of important discoveries in molecular biology Thoroughly updated with new information on gene editing tools viruses and transcription mechanisms termination and antisense Provides learning objectives for each chapter Includes a list of relevant videos from the Internet about the topics covered in the chapter Bibliography of Medical Reviews, 1976 Cold Spring Harbor Symposia on Quantitative Biology Cold Spring Harbor Laboratory of Quantitative Biology, 1933 **The Cumulative Book**
