**Handbook Of Energy Finance: Theories, Practices And Simulations** Stephane Goutte, Duc Khuong Nguyen, 2020-01-30 Modeling the dynamics of energy markets has become a challenging task. The intensification of their financialization since 2004 had made them more complex but also more integrated with other tradable asset classes. More importantly, their large and frequent fluctuations in terms of both prices and volatility, particularly in the aftermath of the global financial crisis 2008-2009, pose difficulties for modeling and forecasting energy price behavior and are primary sources of concerns for macroeconomic stability and general economic performance. This handbook aims to advance the debate on the theories and practices of quantitative energy finance while shedding light on innovative results and technical methods applied to energy markets. Its primary focus is on the recent development and applications of mathematical and quantitative approaches for a better understanding of the stochastic processes that drive energy market movements. The handbook is designed for not only graduate students and researchers but also practitioners and policymakers.

*How Do Households Consume Energy?: Evidence from Latin American and Caribbean Countries* Raul Jimenez Mori, Ariel Yépez-García, 2020-11-22 How do households consume and spend on energy? What are the drivers of their spending and consumption patterns? How does energy consumption have evolved? What is to be expected as the region climbs the development ladder? What are the distributive implications of different energy pricing approaches? This book looks at these questions and examines which policies work in reducing energy poverty and increasing energy savings. The authors unveil the growing household demand for better quality of energy and show that to achieve more cost-effective and progressive public policies, it is necessary to strengthen the transparency and sustainability of energy pricing while having into account
