to build a rock solid application beginning by using Mix to create a new project Then you will learn how the use of Erlang s OTP along with the Elixir abstractions that run on top of it such as GenServer and GenStage that allow you to build applications that are easy to parallelize and distribute You will also master supervisors and supervision trees and comprehend how they are the basis for building fault tolerant applications Then you will use Phoenix to create a web interface for your application Upon finishing implementation you will learn how to take your application to the cloud using Kubernetes to automatically deploy scale and manage it Last but not least you will keep your peace of mind by learning how to thoroughly test and then monitor your application What you will learn Use Elixir tools including IEx and Mix Find out how an Elixir project is structured and how to create umbrella applications Discover the power of supervision trees the basis for fault tolerance Create a Domain Specific Language DSL that abstracts complexity Create a blazing fast web interface for your application with Phoenix Set up an automatic deployment process for the cloud Monitor your application and be warned if anything unexpected happens Who this book is for Mastering Elixir is for you if you have experience in Elixir programming and want to take it to the next level This Elixir book shows you how to build deploy and maintain robust applications allowing you to go from tinkering with Elixir on side projects to using it in a live environment However no prior knowledge of Elixir is required to enjoy the complex topics covered in the book
