

17. T Darwin observed that Galapagos finch beaks matched the types of food available on each island.
18. T Malthus's ideas about population growth and limited resources helped Darwin think about competition in nature.
19. F According to Darwin, all individuals in a population are equally likely to survive and reproduce regardless of traits.

Multiple Choice

20. B Which phrase best summarizes Darwin's idea that individuals with helpful traits leave more offspring over time?
- a. Use and disuse b. Survival of the fittest c. Fixity of species d. Blending inheritance
21. C Which observation did Darwin use to link beak shape to natural selection?
- a. Identical beak sizes b. Random beak sizes c. Beak size matched food size d. No food competition.
22. A Which thinker argued that population growth could outpace resources, influencing Darwin's ideas about competition?
- a. Thomas Malthus b. Charles Lyell c. Gregor Mendel d. Alfred Wallace

Short Answer

23. Describe two ways early fossil discoveries challenged the fixity of species idea.

Fossils revealed organisms that no longer existed, showing that extinction had occurred. They also showed forms different from living species, suggesting that life had changed over time.

24. Explain how Lamarck's explanation for giraffe neck length differs from Darwin's explanation.

Lamarck proposed that giraffes stretched their necks during life and passed the acquired trait to offspring. Darwin explained long necks by variation and natural selection, where individuals with slightly longer necks left more surviving offspring.

25. Explain how Lyell and Malthus each influenced Darwin's thinking about evolution.

Lyell's idea of slow, continuous geological change suggested that there was deep time for biological change. Malthus's work on population growth and limited resources helped Darwin see how competition could favor certain traits.

Open Response

26. Explain how observations, earlier thinkers, and key concepts like variation and natural selection combined to shape Darwin's theory of evolution; support your answer with examples and reasoning.

Darwin's theory grew from combining his observations with ideas from geology and population studies. Fossils and Galapagos finches showed that species vary and can change over long time spans. Lyell's uniformitarianism suggested slow change, and Malthus's work highlighted competition when resources are limited. By linking variation, overproduction, and differential survival, Darwin concluded that natural selection explains how populations evolve over generations.
