Abstract:

This review describes the case of a 55 year old female patient who was diagnosed with Stage II breast cancer at age 50. The patient underwent chemotherapy for four months, after which time she was declared in remission. At age 54 the cancer reappeared and more frequent chemotherapy sessions were given, though the tumor was largely unresponsive. Resultingly, the patient underwent a modified radical mastectomy alongside later chemotherapy. The surgery was found to be successful in stopping the spread of invasive cancer. At three months post-op the patient was declared to be in remission.

Objectives:

The key objectives of this case study are to report the patient's treatment details for staff reflection purposes.
