

ESSENTIALS OF GEOMETRY

For thousands of years, intelligent people have used mathematics to investigate basic shapes and the relationships among physical objects. Ancient Egyptians used geometry to solve many practical problems involving foundations and land areas.

The work of Greek scholars, such as Thales, Euclid, Pythagoras, and Archimedes, laid the foundation for the study of geometry in the Western world. About 1000 A.D., Arabic and the Islamic world organized our geometry of the day into a logical system contained in thirteen “books” known today as *Euclid’s Elements*.

Euclid began his discussion with definitions:

- A point is that which has no parts.
- A line is breadthless length.
- The extremities of a line are points.
- A straight line is a line that lies evenly with the points on itself.
- A surface is that which has length and breadth only.

Today, mathematicians consider the words *point*, *line*, and *length* but do not consider *surface*.

Euclid’s *Elements* was all reason, reason in Greek. One of the most important contributions is that of Dr. Thomas L. Heath.
