

Gravograph LS100Ex & LS100 35W Lasering Parameters

This document provides a base of engraving parameters to be used on Gravograph laserable materials. They are indicative values that can be subject to modification, that are recommended by professional engravers and that have been tested and verified for LS100Ex & LS100 35W

The goal of this document is to help each engraver get a first idea as to how to engrave on Gravograph laserable materials.

The parameters are present in grids and are sorted by product range. Every material can have up to 3 different types of engraving:

- Vector, for lightweight linear tracing
- Raster, for heavy marking
- Cutting

Some materials may not be engraved with a certain type of engraving: if the specific type is not present in the grid of the material, then it's most likely that it is not a recommended engraving method to use on the material.

Best Practices

- | | |
|--------------------|---|
| Floating Pin Table | Cutting - When using a floating pin table, place an aluminium plate under the strips to avoid laser reflection to prevent engraving under the material. |
| Gravogrip | Raster - Use Gravogrip when engraving on thin materials as they can have uneven surfaces. Raster - Avoid using too much power when engraving to prevent damage to the Gravogrip plate. |

In case there is an unexpected behavior during the engraving, please refer to the machine's User Manual for help and advice on how to handle such matters.
