Basic Principles of Structural Equation Modeling Ralph O. Mueller, 2012-12-06 During the last two decades structural equation modeling SEM has emerged as a powerful multivariate data analysis tool in social science research settings especially in the fields of sociology psychology and education Although its roots can be traced back to the first half of this century when Spearman 1904 developed factor analysis and Wright 1934 introduced path analysis it was not until the 1970s that the works by Karl Joreskog and his associates e g Joreskog 1977 Joreskog and Van Thillo 1973 began to make general SEM techniques accessible to the social and behavioral science research communities Today with the development and increasing avail ability of SEM computer programs SEM has become a well established and respected data analysis method incorporating many of the traditional analysis techniques as special cases State of the art SEM software packages such as LISREL Joreskog and Sorbom 1993a b and EQS Bentler 1993 Bentler and Wu 1993 handle a variety of ordinary least squares regression designs as well as complex structural equation models involving variables with arbitrary distributions Unfortunately many students and researchers hesitate to use SEM methods perhaps due to the somewhat complex

underlying statistical representation and theory In my opinion social science students and researchers can benefit greatly from acquiring knowledge and skills in SEM since the methods applied appropriately can provide a bridge between the theoretical and empirical aspects of behavioral research
