

THE GREEN OPTIONS

HOW IT WORKS
 A PHEV is a car that can run on gas or electricity. It has a gas engine and an electric motor. The electric motor can run the car for a short distance, but the gas engine will take over once the battery is depleted. PHEVs are designed to be used in a variety of ways, from driving only on electricity to driving only on gas.

LIMITS OF THE TECHNOLOGY
 PHEVs are limited by the amount of electricity they can store. Most PHEVs have a range of 20-50 miles on electricity. They are also limited by the amount of gas they can hold, which is typically 10-15 gallons. This means that PHEVs are not ideal for long-distance travel.

PROS
 - Lower emissions than gas cars
 - Lower fuel costs than gas cars
 - Longer range than pure electric cars

CONS
 - Higher purchase price than gas cars
 - Limited range on electricity
 - Limited range on gas

CONVENIENCE
 PHEVs are convenient because they can be refueled at gas stations. They also have a longer range than pure electric cars, which means they can be used for longer trips.

EMISSIONS
 PHEVs have lower emissions than gas cars, but they still have some emissions. The emissions are lower when the car is running on electricity, but they are higher when the car is running on gas.

BRAND NAMES
 - Chevrolet Volt
 - Ford Fusion Energi
 - Honda Accord Energi
 - Toyota Camry Hybrid

HOW IT WORKS
 A BEV is a car that runs entirely on electricity. It has a battery pack and an electric motor. The battery pack stores electricity, which is used to power the electric motor. BEVs are designed to be used for short-distance travel, but they can also be used for longer trips if they have a large battery pack.

LIMITS OF THE TECHNOLOGY
 BEVs are limited by the amount of electricity they can store. Most BEVs have a range of 100-300 miles. They are also limited by the amount of electricity they need to charge, which can take several hours.

PROS
 - Lower emissions than gas cars
 - Lower fuel costs than gas cars
 - Quieter than gas cars

CONS
 - Higher purchase price than gas cars
 - Limited range
 - Limited charging infrastructure

CONVENIENCE
 BEVs are convenient because they can be charged at home. They also have a longer range than PHEVs, which means they can be used for longer trips.

EMISSIONS
 BEVs have zero emissions, but they do have some emissions from the electricity used to charge them. The emissions are lower if the electricity is generated from renewable sources.

BRAND NAMES
 - Tesla Model S
 - Nissan Leaf
 - Chevrolet Bolt
 - Ford Focus Electric

HOW IT WORKS
 A FCEV is a car that runs on hydrogen. It has a fuel cell stack and an electric motor. The fuel cell stack converts hydrogen and oxygen into electricity, which is used to power the electric motor. FCEVs are designed to be used for long-distance travel, but they are still in the early stages of development.

LIMITS OF THE TECHNOLOGY
 FCEVs are limited by the amount of hydrogen they can store. Most FCEVs have a range of 300-500 miles. They are also limited by the amount of electricity they need to produce hydrogen, which can be expensive.

PROS
 - Lower emissions than gas cars
 - Lower fuel costs than gas cars
 - Longer range than BEVs

CONS
 - Higher purchase price than gas cars
 - Limited infrastructure
 - Limited charging infrastructure

CONVENIENCE
 FCEVs are convenient because they can be refueled at gas stations. They also have a longer range than BEVs, which means they can be used for longer trips.

EMISSIONS
 FCEVs have zero emissions, but they do have some emissions from the electricity used to produce hydrogen. The emissions are lower if the electricity is generated from renewable sources.

BRAND NAMES
 - Toyota Mirai
 - Hyundai Nexo
 - Honda Clarity Fuel Cell
