Education - Supporting Computational Thinking

Roland Mittermeir, Maciej M. Syslo, 2008-06-27 Informatics Education

Supporting Computational Thinking contains papers presented at the Third International Conference on Informatics in Secondary Schools Evolution and Perspective ISSEP 2008 held in July 2008 in Torun Poland As with the proceedings of the two previous ISSEP conferences 2005 in Klagfurt Austria and 2006 in Vilnius Lithuania the papers presented in this volume address issues of informatics education transcending national boundaries and the fore transcending differences in the various national legislation and organization of the educational system Observing these issues one might notice a trend The proceedings of the First ISSEP were termed From Computer Literacy to Informatics Fundamentals 1 There broad room was given to general education in ICT The ECDL the European Computer Driving License propagated since the late 1990s had pe treated school at this time already on a broad scale and teachers parents as well as pupils were rather happy with this situation Teachers had material that had a clear scope was relatively easy to teach and especially easy to examine Parents had the assurance that their children learn modern and relevant stuff and for kids the c puter was sufficiently modern so that

anything that had to do with computers was considered to be attractive. Moreover, the difficulties of programming, marking, the early days of informatics education in school seemed no longer relevant. Some colleagues had a more distant vision though.

This edition also introduces new conceptual frameworks for teaching, such as the MERge model, and new formats for the professional development of computer science educators. Topics and features include an extensive set of activities to further support the pedagogical principles outlined in each chapter, discusses educational approaches to computational thinking, how to address soft concepts and skills in a MTCS course, and the pedagogy of data science. NEW focuses on teaching methods, lab-based teaching and research in computer science education, as well as on problem-solving strategies, examines how to recognize and address learners' misconceptions, and the different types of questions teachers can use to vary their teaching methods. Provides coverage of assessment, teaching, planning, and designing a MTCS course, reviews high school teacher preparation programs, and how prospective teachers can gain experience in teaching computer science. This easy-to-follow textbook and teaching guide will prove invaluable to computer science educators within all frameworks, including university instructors and high school teachers, as well as to instructors of computer science teacher preparation programs.

The number of African Americans and Latino students receiving undergraduate and advanced degrees in computer science is disproportionately low according to recent surveys. And relatively few African American and Latino high school students receive the kind of institutional encouragement, educational opportunities, and preparation needed for them to choose computer science as a field of study and profession. In *Stuck in the Shallow End*, Jane Margolis looks at the daily experiences of students and teachers in three Los Angeles public high schools: an overcrowded urban high school, a math and science magnet school, and a well-funded school in an affluent neighborhood. She finds an insidious virtual
