

Name:

Student Exploration: Equilibrium and Concentration

Essential Question: How do equilibrium concentrations depend on the initial concentrations of reactants and products?

What You Will Learn: You will learn how to calculate equilibrium concentrations from initial concentrations and how to use the equilibrium constant to predict the direction of a reaction.

- 1. How will the equilibrium concentration of a reactant change if the initial concentration of a reactant is increased? It will decrease.
- 2. How will the equilibrium concentration of a product change if the initial concentration of a reactant is increased? It will increase.
- 3. What happens if the initial concentration of a reactant is increased and the initial concentration of a product is also increased? The system will shift toward the products.

What You Will Do:

In this activity, you will explore how the initial concentrations of reactants and products affect the equilibrium concentrations of reactants and products. You will also explore how the equilibrium constant can be used to predict the direction of a reaction.

Background: A chemical reaction is said to be at equilibrium when the concentrations of reactants and products are constant.

- 1. **What happens if the initial concentration of a reactant is increased?** The equilibrium concentration of the reactant will decrease, and the equilibrium concentration of the product will increase.
- 2. **What happens if the initial concentration of a reactant is increased and the initial concentration of a product is also increased?** The system will shift toward the products.
- 3. **What happens if the initial concentration of a reactant is increased and the initial concentration of a product is also increased?** The system will shift toward the products.
- 4. **What happens if the initial concentration of a reactant is increased and the initial concentration of a product is also increased?** The system will shift toward the products.

Equilibrium And Concentration Gizmo Answer
