Human Geography in Action Michael Kuby, John Harner, Patricia Gober, 2013-01-14 Michael Kuby's 6th edition of *Human Geography in Action* is comprised of 14 stimulating concept based chapters. The text aims to develop geographic problem solving skills that prove valuable to readers. Each chapter begins with an introduction to a concept followed by a case study tying the concept into the real world and wraps up with an activity. These engaging activities featured throughout the text further its Do Geography approach. *Human Geography in Action* provides the opportunity to use GIS to investigate ethnic distributions and culture regions, track the AIDS epidemic over space and time, model interstate migration flows, simulate India's demographic future, add new baseball franchises, animate past urban growth and assess future growth areas. *Grow a Sustainable Diet* Cindy Conner, 2014-03-01 Row by row maximize your harvest and feed your soil by developing a customized plan for your garden. Everyone loves to prepare a meal with ingredients fresh from their own garden. But for most of us, no matter how plentiful our harvest, homegrown produce comprises only a fraction of what we eat. And while many gardening guides will tell you everything you ever wanted to know about individual crops, few tackle the more involved task of helping you maximize the percentage of your diet you grow yourself. *Grow a Sustainable Diet* will help you develop a comprehensive customized garden plan to produce the maximum number of calories and nutrients from any available space. Avoid arriving in August buried under a mountain of kale or zucchini and not much else by making thoughtful choices at the planning stage, focusing on dietary staples and key nutrients. Learn how to calculate which food and cover crops are best for your specific requirements. How many seeds and plants of each variety you should sow. What and when to plant, harvest and replant for maximum yield. Focusing on permaculture principles, biointensive gardening methods, getting food to the table with minimum fossil fuel input and growing crops that sustain both you and your soil, this complete guide is a must read for anyone working toward food self sufficiency for themselves or their family.

This edition focuses on simplifying complex environmental systems. Reviews current software tools and techniques for modelling. Gives practical examples from a wide variety of disciplines e.g. climatology, ecology, hydrology, geomorphology and engineering. Has an associated website.
