Intelligent Agents VI. Agent Theories, Architectures, and Languages Nicholas R. Jennings, Yves

Lesperance, 2000-02-16 Intelligent agents are one of the most important developments in computer science in the 1990s. Agents are of interest in many important application areas ranging from human computer interaction to industrial process control. The ATAL workshop series aims to bring together researchers interested in the core aspects of agent technology. Specifically, ATAL addresses issues such as theories of agency, software architectures for intelligent agents, methodologies and programming languages for realizing agents, and software tools for developing and evaluating agent systems. One of the strengths of the ATAL workshop series is its emphasis on the synergies between theories, infrastructures, architectures, methodologies, formal methods, and languages. This year's workshop continued the ATAL trend of attracting a large number of high quality submissions. In more detail, 75 papers were submitted to the ATAL 99 workshop from 19 countries. After stringent reviewing, 22 papers were accepted for presentation at the workshop. After the workshop, these papers were revised on the basis of comments received both from the original reviewers and from discussions at the workshop itself. This volume contains these revised papers.

Intelligent Agent Software Engineering, 2003-01-01 From theoretical and practical viewpoints, the application of intelligent software agents is a topic of major interest. There has been a growing interest not only in new methodologies for development of intelligent software agents but also the way in which these methodologies can be supported by theories and practice. Intelligent Agent Software Engineering focuses on addressing the theories and practices associated with implementing intelligent software agents.

Intelligent Agent Technology: Systems, Methodologies And Tools - Proceedings Of The 1st Asia-pacific Conference On Intelligent Agent Technology (Iat '99) Jiming Liu, Ning Zhong, 1999-11-05 This book is a collection of high quality technical papers contributed by active researchers and leading practitioners in intelligent agent technology. It offers a closer look at the state of the art in the development of intelligent agents and examines in depth the underlying logical, cognitive, physical, and biological foundations, as well as the performance characteristics of various approaches in intelligent agent technology. It will stimulate the development of new models, new methodologies, and new tools for building a variety of embodiments of agent based systems.

Intelligent Decision Technology Support in Practice Jeffrey W. Tweedale, Rui Neves-Silva, Lakhmi C. Jain, Gloria Phillips-Wren, Junzo

Watada, Robert J. Howlett, 2015-08-22 This book contains a collection of innovative chapters emanating from topics raised during the 5th KES International Conference on Intelligent Decision Technologies (IDT) held during 2013 at Sesimbra, Portugal. The authors were invited to expand their original papers into a plethora of innovative chapters espousing IDT methodologies and applications. This book documents leading edge contributions representing advances in Knowledge Based and Intelligent Information and Engineering Systems. It acknowledges that researchers recognize that society is familiar with modern Advanced Information Processing and increasingly expect richer IDT systems. Each chapter concentrates on the theory

design development implementation testing or evaluation of IDT techniques or applications Anyone that wants to work with IDT or simply process knowledge should consider reading one or more chapters and focus on their technique of choice Most readers will benefit from reading additional chapters to access alternative technique that often represent alternative approaches This book is suitable for anyone interested in or already working with IDT or Intelligent Decision Support Systems It is also suitable for students and researchers seeking to learn more about modern Artificial Intelligence and Computational Intelligence techniques that support decision making in modern computer systems Intelligent Agents VII. Agent Theories Architectures and Languages Cristiano Castelfranchi, Yves Lesperance, 2003-07-31 Intelligent agents are one of the most important developments in computer science of the past decade Agents are of interest in many important application areas ranging from human computer interaction to industrial process control The ATAL workshop series aims to bring together researchers interested in the core micro aspects of agent technology Specifically ATAL addresses issues such as theories of agency software architectures for intelligent agents methodologies and programming languages for realizing agents and software tools for applying and evaluating agent systems One of the strengths of the ATAL workshop series is its emphasis on the synergies between theories languages architectures infrastructures methodologies and formal methods This year's workshop continued the ATAL trend of attracting a large number of high quality submissions In more detail 71 papers were submitted to the ATAL 2000 workshop from 21 countries After stringent reviewing 22 papers were accepted for publication and appear in these proceedings As with previous workshops in the series we chose to emphasize what we perceive as important new themes in agent research This year's themes were both associated with the fact that the technology of intelligent agents and multi agent systems is beginning to migrate from research labs to software engineering centers As agents are deployed in applications such as electronic commerce and start to take over responsibilities for their human users techniques for controlling their autonomy become crucial As well the availability of tools that facilitate the design and implementation of agent systems becomes an important factor in how rapidly the technology will achieve widespread use Intelligent Agents III. Agent Theories, Architectures, and Languages Michael J. Wooldridge, Nick Jennings, 1997-01-22 Intelligent agents are computer systems that are capable of flexible autonomous action in dynamic typically multi agent domains Over the past few years the computer science community has begun to recognise that the technology of intelligent agents provides the key to solving a range of complex software application problems for which traditional software engineering tools and techniques offer no solution This book the third in a series represents the state of the art in the science of agent systems It is based on papers presented at the 3rd workshop on Agent Theories Architectures and Languages ATAL 96 held in conjunction with the European Conference on Artificial Intelligence ECAI 96 in Budapest Hungary in August 1996 It is essential reading for anyone interested in this vital new technology Intelligent Agents, 2001 **Transactions on Computational Collective Intelligence X** Ngoc-Thanh Nguyen, 2013-05-20 These

transactions publish research in computer based methods of computational collective intelligence CCI and their applications in a wide range of fields such as the Semantic Web social networks and multi agent systems TCCI strives to cover new methodological theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals artificial and or natural The application of multiple computational intelligence technologies such as fuzzy systems evolutionary computation neural systems consensus theory etc aims to support human and other collective intelligence and to create new forms of CCI in natural and or artificial systems This tenth issue contains 13 carefully selected and thoroughly revised contributions

Green Agent User's Guide David A. Shlapak, Rand Corporation, 1988 This Note is a primer on the use of Green Agent the RAND Strategy Assessment Center's model of nonsuperpower political military behavior in crisis and conflict Green is a rule based decision model written in the RAND ABEL programming language it is capable of simulating the behavior of more than one hundred national actors It takes as inputs a variety of assumptions regarding the characteristics of each country to be modeled and produces as outputs a set of decisions which among other things controls the actions of each country's military forces and governs access to its territory The Note describes Green briefly then details the parameters and variables whose settings and

values constitute its inputs and outputs It also discusses how to think about and use Green within the context of the RAND Strategy Assessment System RSAS and describes how to use various RSAS tools to access information about Green s activities This Note is not intended as a reference manual for the model N 2363 1 is available Rand abstracts
