Top Student, Top School? Alexandria Walton Radford, 2013-05-02 Most of us think that valedictorians can write their own ticket. By reaching the top of their class, they have proven their merit, so their next logical step should be to attend the nation's very best universities. Yet in *Top Student, Top School*, Alexandria Walton Radford of American Institutes for Research reveals that many valedictorians do not enroll in prestigious institutions. Employing an original five-state study that surveyed nine hundred public high school valedictorians, she sets out to determine when and why valedictorians end up at less selective schools, showing that social class makes all the difference. Radford traces valedictorians' paths to college and presents damning evidence that high schools do not provide sufficient guidance on crucial factors affecting college selection, such as reputation, financial aid, and even the application process itself. Left in a bewildering environment of seemingly similar options, many students depend on their parents for assistance, and this allows social class to rear its head and have a profound impact on where students attend. Simply put, parents from less affluent backgrounds are far less informed about differences in colleges, quality, the college application process, and financial aid options, which significantly limits their child's chances of attending a competitive school, even when their child has already managed to become a valedictorian. *Top Student, Top School* pinpoints an overlooked yet critical juncture in the education process, one that stands as a barrier to class mobility. By focusing solely on valedictorians, it shows that students' paths diverge by social class, even when they are similarly well-prepared academically, and this divergence is traceable to specific failures by society that we can and should address. Learning and Understanding National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Programs for Advanced Study of Mathematics and Science in American High Schools, 2002-08-06 This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system, and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs, as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.
