The Education Invasion Joy Pullmann, 2017-03-14 Most Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation s schools Who benefits And how can citizens regain local self governance in education so their children s minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats The Education Invasion offers answers and remedies

If Einstein Ran the Schools Thomas Armstrong Ph.D., 2019-10-11 Many world class thinkers and creators have been concerned about the state of education in the United States Discover their thoughts on how children really learn and what teachers must do to

optimally tap children's latent abilities. During the last three decades, education reformers have pushed standardized testing and policies like No Child Left Behind and Common Core to improve test scores and proficiency in basic skills. However, during this period, that author Thomas Armstrong calls the miseducation of America, a number of troubling trends have surfaced, including a decrease in creative thinking scores among children in kindergarten through third grade. Rather than focus on what's wrong with the education system that has produced these outcomes, Armstrong lays out what creative thinkers know about how children should be educated. In an extended thought experiment, he asks what would happen if we turned the reins of educational policy over not to the politicians and educational bureaucrats but to eminent thinkers and creators like Albert Einstein, Pablo Picasso, Martin Luther King Jr., Rachel Carson, Doris Lessing, Jane Goodall, and other seminal culture builders. What might they say about the best way to educate a child? If Einstein Ran the Schools suggests that the answers to this intriguing question should guide future efforts to reform our nation's schools.

Cognitive Sciences and Education in Non-WEIRD Populations Marcus Vinicius Alves, Roberta Ekuni, Maria Julia Hermida, Juan Valle-Lisboa, 2022-08-27. This book aims to present theoretical and practical innovations in the cognitive sciences and education fields, focusing on studies and research conducted with non-WEIRD, i.e., western educated industrialized rich and democratic populations, especially from Latin America. Cognitive sciences and neuroscience have increased exponentially their knowledge in the last three decades, and today there is a corpus of knowledge about our central nervous system and its functioning that adequately understood has promising contributions for the educational field. Most of this knowledge, however, comes from central countries, North America, Europe, and is based on studies conducted on what has been called WEIRD populations. Much less is known about how the integration of cognitive sciences and neuroscience could impact education in non-WEIRD populations, which represent the great majority of the world's population and have quite diverse cultural and social characteristics. So the main aim of this book is to present a non-WEIRD scientific approach to problems in the cognitive sciences, neuroscience, and education fields. Research presented in this contributed volume takes advantage of the diverse populations that characterize developing countries to explore how underrepresented populations learn, what works, and what does not for cognitive science and education, not only for the developing world but also for understanding diversity in the whole world. Departing from this focus on diversity, chapters in this book present studies on theories, beliefs, and misconceptions about the relationship between cognitive sciences and education, child and adolescent cognitive development, mathematics, and language, academic performance, and cognitive interventions to improve educational practice. *Cognitive Sciences and Education in Non-WEIRD Populations: A Latin American Perspective* will be a useful resource for both cognitive scientists and educational researchers interested in developing a more culturally sensitive approach to basic and applied research on cognitive sciences of education. *The Special Edge*, 2013.
