Ross Honsberger is the author of several best selling and enthusiastically reviewed books published by the Mathematical Association of America. *Mathematical Gems II* follows and strengthens the tradition established by Honsberger. It has something for everyone: students, teachers, and armchair mathematicians alike. Here you will find gems from elementary combinatorics, number theory, and geometry. Each essay contains historical commentary, interesting anecdotes, mathematical background, and a careful discussion built around a famous problem, theorem, or mathematician. It also contains a collection of fascinating and illuminating exercises related to the topics of the essays.

*Mathematical Gems I* Ross Honsberger, 1974-06-01. This book deals with the number system, one of the basic structures in mathematics. It is concerned especially with the way of classifying numbers into various categories: for example, it provides some criteria for deciding if a given number is rational (i.e. representable as a common fraction) or irrational, if it is algebraic or transcendental. In the course of the later chapters, the reader is introduced to some of the more recent developments in mathematics.

Professor Niven's book may be read with profit by interested high school students as well as by college students and others who want to know more about the basic aspects of pure mathematics. Most readers will find the early chapters well within their grasp, while ambitious readers will profit by the more advanced material to be found in later chapters.

Ross Honsberger was born in Toronto, Canada, in 1929 and attended the University of Toronto. After more than a decade of teaching mathematics in Toronto, he took advantage of a sabbatical leave to continue his studies at the University of Waterloo, Canada. He joined the faculty in 1964, Department of Combinatorics and Optimization, and has been there ever since. He is married, the father of three, and grandfather of three. He has published seven bestselling books with the Mathematical Association of America. Here is a selection of reviews of Ross Honsberger's books.

The reviewer found this little book a joy to read; the text is laced with historical notes and lively anecdotes, and the proofs are models of lucid, uncluttered reasoning about Mathematics. P. Haggis, Jr. in *Mathematical Reviews*. This book is designed to appeal to high school teachers and undergraduates, particularly, but should find a much wider audience. The clarity of exposition and the care taken with all aspects of explanations, diagrams, and notation is of a very high standard.

about *Mathematical Gems II*. K. E. Hirst in *Mathematical Reviews*. All (i.e.) the articles in *Mathematical Gems III* are written in the very clear style that characterizes the two previous volumes, and there is bound to be something here that will appeal to anyone, both student and teacher alike. For instructors, *Mathematical Gems III* is useful as a source of thematic ideas around which to build classroom lectures. *Mathematical Gems III* is to be warmly recommended.

**Maxima and Minima Without Calculus** Ivan Niven,1981 Describes techniques for solving problems in maxima and

He presents intriguing stimulating problems that can be solved with elementary mathematical techniques. It will give pleasure to motivated students and their teachers but it will also appeal to anyone who enjoys a mathematical challenge. Most of the problems in the collection have appeared on national or international Olympiads or other contests. Thus they are quite challenging with solutions that are all the more rewarding. The solutions use straightforward arguments from elementary mathematics often not very technical arguments with only the occasional foray into sophisticated or advanced ideas. Anyone familiar with elementary mathematics can appreciate a large part of the book. The problems included in this collection are taken from geometry number theory probability and combinatorics. Solutions to the problems are included.
