

# Human Inheritance Lab

## Objectives

To determine phenotypic characteristics and genotypes for human inheritable traits.  
To determine the frequency (%) of dominant and recessive trait in population.

## Materials

Index

## Procedure

Obtain the phenotypic characteristics and the corresponding gene genotypes for the traits listed below:

- In the first row determine Table 1, list the 27 traits/characteristics. Then make sure that the dominant phenotype and the recessive phenotype. Use the examples in the table for correct labeling.
- In the corresponding of Table 1, write your phenotypes and determine its dominance or recessive.
- In the third column of Table 1, write your inheritance trait gene genotypes.

## Questions

- If you show the recessive trait, then you must be homozygous recessive.
- If you show dominant trait, you may be heterozygous/dominant (dominant) or homozygous for that trait.
  - If one of your parents shows the recessive trait, then you must have passed on a gene for the recessive trait, and you must be heterozygous for that trait.
  - If neither of your parents shows the recessive trait, you may not know if you are heterozygous or homozygous dominant for that trait. In that case, you **may** provide genotypes (heterozygous and homozygous dominant).

\*\*\* If you need help, you may ask your parents about their traits. \* DO NOT TALK TO OTHERS!

\*\*\*\*\* If your parents get married before you, then you can't ask them, please give **any** possible genotypes for dominant/dominant gene.
