*Forced Out* Kevin Maxwell, 2020-07-05 A gay black British police officer's memoir of prejudice racism and homophobia on the force in the twenty first century Kevin Maxwell was a dream candidate for the police force he had a long held desire to serve his community a strong moral compass and a clear aptitude for both the strategic and practical aspects of policing And as a gay black man from a working class family he could easily have been a poster boy for the force's stated commitment to equal opportunities Joining just after the 9/11 attacks Kevin entered policing determined to keep communities safe in the face of a changing world But instead he came up against entrenched prejudice open racism and homophobia For more than ten years Kevin strove against the odds until he took the force to an employment tribunal with devastating results *Forced Out* is a revelatory expos combining deeply affecting memoir with sharp analysis and a fascinating insider perspective on day to day life in the force It is a touchstone for the silent many who have either tried to ignore abuse for the sake of their career or who have been bullied out of their jobs It paints a sobering portrait of an institution that has not yet learned the lessons of the past and whose prejudice is informing the cases it chooses to investigate and the way it investigates them And it asks the important question what needs to change One of the most compulsive books I've read in a long while Bernadine Evaristo award winning author of *Girl Woman Other*

*Intracellular biomineralization in bacteria* Damien Faivre,2014-11-14 Bacteria can sequester metals and other ions

intracellularly in various forms ranging from poorly ordered deposits to well ordered mineral crystals Magnetotactic bacteria provide one example of such intracellular deposits They synthesize intracellular magnetic minerals of magnetite  $Fe_3O_4$  and or greigite  $Fe_3S_4$  magnetosomes which are generally less than 150 nm and organized into one or multiple chain structures The magnetosome chains act like a compass needle to facilitate the navigation of magnetotactic bacteria by using the Earth's magnetic field Due to their ubiquitous distribution in aquatic and sedimentary environments magnetotactic bacteria play important roles in global iron cycling Other intracellular mineral phases have been evidenced in bacteria such as  $As_2S_3$   $CaCO_3$   $CdS$   $Se_0$  or various metal phosphates which may play as well a significant role in the geochemical cycle of these elements However in contrast to magnetotactic bacteria the biological and environmental function of these particles remains a matter of debate In recent years such intracellularly biomineralizing bacteria have become an attractive model system for investigating the molecular mechanisms of organelle like structure formation in prokaryotic cells The geological significance of intracellular biomineralization is important spectacular examples are fossil magnetosomes that may significantly contribute to the bulk magnetization of sediments and act as potential archives of paleoenvironmental changes In addition intracellular mineral deposits formed by bacteria have potentially versatile applications in biotechnological and biomedical fields After more than four decades of research the knowledge on intracellularly biomineralizing bacteria has greatly improved The aim of this Research Topic is to highlight recent advances in our understanding of intracellular biomineralization by bacteria Magnetotactic bacteria are a system of choice for that topic but other intracellularly biomineralizing bacteria may bring a unique perspective on that process Research papers reviews perspectives and opinion papers on i the diversity and ecology of intracellularly biomineralizing bacteria ii the molecular mechanisms of intracellular biomineralization iii the chemo and magneto taxis behaviors of magnetotactic bacteria iv the involvement of intracellularly biomineralizing bacteria in local or global biogeochemical cycling v the paleoenvironmental reconstructions and paleomagnetic signals based on fossil magnetosomes vi and the applications of intracellular minerals in biomaterial and biotechnology were welcomed
