## Instructor Information

---

Daniel Jerison

dcjerison@usfca.edu

**Office Hours**

Monday 2-3 pm, Tuesday 1-2 pm, Thursday 3-4 pm

Office Location: Harney 107F

## Course Description

---

Differentiation of algebraic, exponential, logarithmic, trigonometric, and inverse trigonometric functions; implicit differentiation; curve sketching; indeterminate forms; velocity and acceleration; optimization; other applications of differentiation; Fundamental Theorem of Calculus, with applications to area and volume. Four hours lecture. Offered every semester.

Calculus is the mathematical study of continuous change. Fields such as physics, engineering, biology, and economics rely on its notions and vocabulary. This class will introduce you to the main ideas of the subject, most importantly **rates of change** and **areas under curves**, focusing on both conceptual understanding and computational proficiency.

## Course Learning Outcomes

---

- Demonstrate proficiency in the core concepts of introductory calculus, such as limits, continuity, differentiation, applications of derivatives, antiderivatives, area, and volume.

Algebra 2 is a course in mathematics offered in the United States public and private school systems taken by approximately 85% of all graduating high school seniors by the age of 17 Two major studies by the U S Department of Education have shown that Algebra 2 is a gateway course that predicts student graduation from college and their eventual qualification for high paying careers The course is typically taught in Grade 10 as a two semester series following prerequisite courses in Algebra I and or Geometry The course stresses student mastery of the analysis and graphing of polynomials logarithmic exponential and trigonometric functions as well as probability statistics complex numbers and matrix algebra with some applications to real world problems in which these modeling techniques can often be seen to apply In keeping with the intent to show how Algebra 2 topics connect with real world applications textbooks commonly include several hundred word problems that are generally culled from situations that students may encounter often involving economics This book contains over 200 problems spanning 70 specific topic areas covered in a typical Algebra 2 course A selection of application problems featuring astronomy earth science and space exploration were then designed to support each specific topic often with more than one example in a specific category Each problem is introduced with a brief paragraph about the underlying science written in a simplified jargon free language where possible Problems are often presented as multi step or multi part activities The intent of these problems is not to follow an explicitly inquiry based approach but to systematically show students how problems and questions of a specific type are often solved Once students have mastered a particular approach there are many opportunities available for students to go beyond each problem and inquire about other connections that may suggest themselves as the student completes each problem or a collection of problems     *Cracking the Virginia SOL* Steven A. Leduc, Princeton Review (Firm), 2000 The Princeton Review realizes that acing the Algebra II exam is very different from getting straight As in school They don't try to teach students everything there is to know about algebra only the techniques they'll need to score higher on the exam There's a big difference In *Cracking the Virginia SOL EOC Algebra II* TPR will teach test takers how to think like the test makers and Eliminate incorrect answer choices using Process of Elimination and other techniques Earn more points by Plugging In numbers in place of letters on algebra problems Use Backsolving to solve

problems when test takers are unsure of the answer Test knowledge with review questions for each algebra concept covered This book includes 2 full length simulated End of Course Algebra II exams All of TPR s sample test questions are just like the ones test takers will see on the actual exam and TPR fully explains every solution Contents Include Structure and Strategies Expressions and Operations Equations and Inequalities Functions Analytic Geometry and Algebraic Systems II Practice Exams
