**Journal Development** Ashok Yakkaldevi, *Multidimensional Journal Evaluation* Stefanie Haustein, 2012-04-26 Scientific communication depends primarily on publishing in journals The most important indicator to determine the influence of a journal is the Impact Factor Since this factor only measures the average number of citations per article in a certain time window it can be argued that it does not reflect the actual value of a periodical This book defines five dimensions which build a framework for a multidimensional method of journal evaluation The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011

How to Publish a Scientific Paper in a High Impact Factor Journal David Smith, 2018-05-02 High impact factor publications are absolutely necessary for advancing an academic science career but unless you are already part of an elite insider s club no one will help you succeed Public advice is generic and unhelpful because editorial gatekeepers will not openly admit that the publication system is unfairly biased against you Instead the myth of meritocracy promotes the false notion that great science is all you need to publish well Welcome to a realistic and practical look at how to publish your scientific paper in a high impact factor journal From designing your research proposal to writing a rebuttal this book discusses strategies for a top publication This is not another regurgitated book about writing scientific manuscripts This book covers the difficult parts that are left out or unspoken by others It fills in the missing gaps This book is not for researchers in well funded laboratories at top institutes who are already well versed in these issues This is a book for scientists everywhere else for the ones who may never have a fair chance but who still deserve the best chance

**Scientific Writing for Impact Factor Journals** Eric Lichtfouse, 2013-01-01 Publish or Perish This old adage illustrates the importance of scientific communication essential to

research it also represents a strategic sector for each country's competitiveness. An often neglected topic, scientific communication, is of vital importance with new information technologies accelerating and profoundly changing how knowledge is disseminated. The necessity of optimally disseminating experts' findings has also become crucial to researchers, institutes, and universities alike, which has prompted the recent advent of Impact Factors for the evaluation and financing of research, the goal being for scientific knowledge to be equally distributed to a very broad audience, especially to the media, entrepreneurs, and sociopolitical players. This handbook presents the golden rules for publishing scientific articles. In order to do away with major recurring errors, the author explains how to easily structure an article and offers support for the typical mistakes made by native French speakers publishing in English, tips on how to make the style more academic or more general to fit your intended readership, and in the book's closing section suggests new publishing techniques of the Internet age, such as the micro article, which allows researchers to focus their findings into a single innovative point. The major principles presented can be applied to a broad range of documents, such as theses, industry reports, publicity texts, letters of intent, CVs, resumes, blogs, and press releases, as all of these documents involve presenting information on advances, discoveries, innovations, or changes to our previous knowledge.

*Improved, extended, and total impact factor of a journal* Florentin Smarandache, 2021-06-03. In this short paper, we recall the Garfield Impact Factor of a journal, we improve and extend it, and eventually we present the Total Impact Factor that reflects the most accurate impact factor.

*Science and Technology Text Mining* Ronald N. Kostoff, Henry J. Eberhart, Darrel R. Toothman, Robert Pellenberg, 2003-08-01. This report shows how Database Tomography can be used to derive technical intelligence from the published literature. Database Tomography is a patented system for analyzing large amounts of textual computerized material. It includes algorithms for extracting multi-word phrase frequencies and performing phrase proximity analyses. Phrase frequency analysis provides the pervasive themes of a database, and phrase proximity analysis provides the relationships among the pervasive themes and between the pervasive themes and sub-themes. One potential application of Database Tomography is to obtain the thrusts and interrelationships of a technical field from papers published in the literature within that field. This report provides applications of Database Tomography to analyses of both the non-technical field of Research Impact Assessment (RIA) and the technical field of Chemistry. A database of relevant RIA articles was analyzed to produce characteristics and key features of the RIA field. The journals that carry the most RIA papers, the institutions most active in RIA, the keywords most often specified by the authors, and the authors whose works are cited most frequently are identified. The pervasive themes of RIA are identified through multi-word phrase analyses of the database, and the relationships among the pervasive themes and between the pervasive themes and sub-themes are identified through phrase proximity analyses. A similar process was applied to Chemistry, with the exception that the database was limited to one year's issues of the *Journal of the American Chemical Society*. Wherever possible, the RIA and Chemistry results were compared. Finally, the conceptual use of Database

Christopher W. Forstall, Walter J. Scheirer, 2019-07-18 This book introduces quantitative intertextuality a new approach to the  
algorithmic study of information reuse in text sound and images Employing a variety of tools from machine learning natural  
language processing and computer vision readers will learn to trace patterns of reuse across diverse sources for scholarly  
work and practical applications The respective chapters share highly novel methodological insights in order to guide the  
reader through the basics of intertextuality In Part 1 Theory the theoretical aspects of intertextuality are introduced leading  
to a discussion of how they can be embodied by quantitative methods In Part 2 Practice specific quantitative methods are  
described to establish a set of automated procedures for the practice of quantitative intertextuality Each chapter in Part 2  
begins with a general introduction to a major concept e g lexical matching sound matching semantic matching followed by a  
case study e g detecting allusions to a popular television show in tweets quantifying sound reuse in Romantic poetry  
identifying influences in fan fiction by thematic matching and finally the development of an algorithm that can be used to  
reveal parallels in the relevant contexts Because this book is intended as a gentle introduction the emphasis is often on  
simple yet effective algorithms for a given matching task A set of exercises is included at the end of each chapter giving  
readers the chance to explore more cutting edge solutions and novel aspects to the material at hand Additionally the book's  
companion website includes software R and C library code and all of the source data for the examples in the book as well as  
supplemental content slides high resolution images additional results that may prove helpful for exploring the different facets  
of quantitative intertextuality that are presented in each chapter Given its interdisciplinary nature the book will appeal to a
