

# Mapping GeoLab

1.b Read and interpret topographic and geologic maps.

## Using a Topographic Map

**T**opographic maps show two-dimensional representations of Earth's surface. With these maps, you can determine how steep a hill is, what direction streams flow, and where mines, wetlands, and other features are located.

### Preparation

#### Problem

How can you use a topographic map to interpret information about an area?

#### Materials

ruler  
pencil  
string

### Procedure

1. Use the map to answer the following questions. Be sure to check the map's scale.
2. Use the string to measure distances between two points that are not in a straight line. Lay the string along the

- curves, and then measure the distance by laying the string along the ruler.
3. Remember that elevations on United States Geological Survey maps are given in feet.

### Analyze

1. What is the contour interval?
2. Calculate the stream gradient of Big Wildhorse Creek from the Gravel Pit in section 21 to where the creek crosses the road in section 34.
3. What is the highest elevation of the jeep trail? If you followed the jeep trail from the highest point to where it intersects an unimproved road, what

- would be your change in elevation?
4. If you started at the bench mark (BM) on the jeep trail and hiked along the trail and the road to the Gravel Pit in section 21, how far would you have hiked?
5. What is the straight line distance between the two points in question 4? What is the change in elevation?

### Conclude & Apply

1. Does Big Wildhorse Creek flow all year round? Explain your answer.
2. What is the shortest distance along roads from the Gravel Pit in

- section 21 to the secondary highway?
3. Draw a profile of the land surface from the bench mark in section 22 to the Gravel Pit in section 33.
