

GEAR SELECTION

FIG. 28 Tractor is equipped to provide eight forward gear speeds and two reverse gear speeds. Transmission shift lever 1 provides four forward gears and one reverse gear. These gear selections are accompanied by large shift force.

Shift lever 2 provides two ranges in each transmission gear speed. This lever offers most change in ground speed.

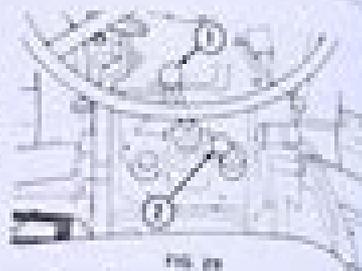

FIG. 28

FIG. 29 Shift pattern and arrangement of gear speeds in each shift range is shown in right.

Reverse clutch pedal and parking shift lever in neutral position. Release parking brake lever and shift pedals. Then slowly release clutch pedal. Slowly engage transmission gear and/or range to desired range. Depress clutch and shift pedals engaging the desired selected range and gear combination with tractor operation.

IMPORTANT: Always check and use water before shifting large and/or transmission gear lever.

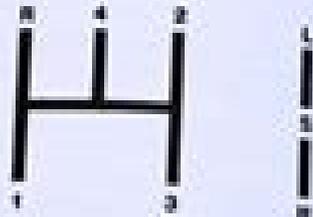

FIG. 29

Select the gear which will give the best fuel consumption without overloading the engine. Remember that ground conditions in the same field may vary. Therefore, change gear which changes all speed relationships and will provide some reserve power for rough work.

IMPORTANT: Never use the tractor in "lipping" the clutch and avoid "lipping" the clutch pedal. This will cause premature and normal clutch failure.

CAUTION: Never coast down slopes with the clutch disengaged (pedal depressed) or other lever is raised.

DRIVING RANGE			
Reverse	R	5.27	2.63
Range	R	13.08	6.73

*To obtain d'entraînement gear in reverse RPM 20% increased from engine output in 2000 RPM and use transmission output in 14 0/100 of full speed.

BRAKE USAGE

FIG. 31 Brake pedals 1 and 2 may be used independently of one another to stop or slowing of tractor when used in the listed operation. Release brake pedals and use as required in listed operation.

When tractor is equipped for fully loaded or higher use of speed brake pedals must be locked together with lock 2 combination and tractor must be stopped.

CAUTION: Do not use one wheel braking at high speed. Always lock brake pedals together when tractor is being transported. Make sure brakes are released easily.

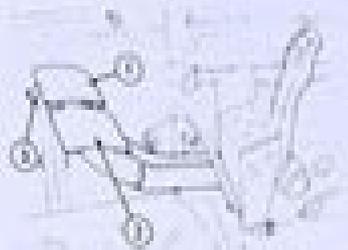

FIG. 31

DIFFERENTIAL LOCK

FIG. 32 Differential lock pedal 1 should only be depressed when required as effectiveness of the steering is greatly reduced. To engage differential lock, depress clutch pedal and allow all rear wheel speed to equalize. Carefully increase pedal pressure to engage the chain.

When further use of differential lock is not required, release differential lock pedal. Pedal should normally return to the "off" position. On tractor the differential lock pedal has return spring operation after foot is removed from pedal due to spring difference between front wheels. In the case where clutch pedal and foot are both depressed while tractor is in motion to release the pedal.

IMPORTANT: Do not engage differential lock while wheel spinning. Normal steering change will result.
