Handbook of Water and Energy Management in Food Processing Jiri Klemes, Robin Smith, Jin-Kuk Kim, 2008-06-30 Effective water and energy use in food processing is essential not least for legislative compliance and cost reduction This major volume reviews techniques for improvements in the efficiency of water and energy use as well as wastewater treatment in the food industry Opening chapters provide an overview of key drivers for better management Part two is concerned with assessing water and energy consumption and designing strategies for their reduction These include auditing energy and water use and modelling and optimisation tools for water minimisation Part three reviews good housekeeping procedures measurement and process control and monitoring and intelligent support systems Part four discusses methods to minimise energy consumption Chapters focus on improvements in specific processes such as refrigeration drying and heat recovery Part five discusses water reuse and wastewater treatment in the food industry Chapters cover water recycling disinfection techniques aerobic and anaerobic systems for treatment of wastewater The final section concentrates on particular industry sectors including fresh meat and poultry cereals sugar soft drinks brewing and winemaking With its distinguished editors and international team of contributors Handbook of water and energy management in food processing is a standard reference for the food industry Provides an overview of key drivers for better management Reviews techniques for improvements in efficiency of water and energy use and waste water treatment Examines house keeping procedures and measurement and process control

Introduction to Advanced Food Process Engineering Jatindra Kumar Sahu, 2014-03-24 Food materials are processed prior to their consumption using different processing technologies that improve their shelf life and maintain their physicochemical biological and sensory qualities Introduction to Advanced Food Process Engineering provides a general reference on various aspects of processing packaging storage and quality control and assessment systems describing the basic principles and major applications of emerging food processing technologies The book is divided into three sections systematically examining processes from different areas of food process engineering Section I covers a wide range of advanced food processing technologies including osmo concentration of fruits and vegetables membrane technology nonthermal processing emerging drying technologies CA and MA storage of fruits and vegetables nanotechnology in food processing and computational fluid dynamics modeling in food

processing Section II describes food safety and various non destructive quality assessment systems using machine vision systems vibrational spectroscopy biosensors and chemosensors Section III explores waste management by product utilization and energy conservation in food processing industry With an emphasis on novel food processes each chapter contains case studies and examples to illustrate state of the art applications of the technologies discussed *Food Process Engineering and Quality Assurance* C.O. Mohan,Elizabeth Carvajal-Millan,C.N. Ravishankar,A. K. Haghi,2018-02-28 This new book Food Process Engineering and Quality Assurance provides an abundance of valuable new research and studies in novel technologies used in food processing and quality assurance issues of food The 750 page book gives a detailed technical and scientific background of various food processing technologies that are relevant to the industry The food process related application of engineering technology involves interdisciplinary teamwork which in addition to the expertise of interdisciplinary engineers draws on that of food technologists microbiologists chemists mechanical engineers biochemists geneticists and others The processes and methods described in the book are applicable to many areas of the food industry including drying milling extrusion refrigeration heat and mass transfer membrane based separation concentration centrifugation fluid flow and blending powder and bulk solids mixing pneumatic conveying and process modeling monitoring and control Food process engineering know how can be credited with improving the conversion of raw foodstuffs into safe consumer products of the highest possible quality This book looks at advanced materials and techniques used for among other things chemical and heat sterilization advanced packaging and monitoring and control which are essential to the highly automated facilities for the high throughput production of safe food products With contributions from prominent scientists from around the world this volume provides an abundance of valuable new research and studies on novel technologies used in food processing and quality assurance issues It gives a detailed technical and scientific background of various food processing technologies that are relevant to the industry Special emphasis is given to the processing of fish candelilla dairy and bakery products Rapid detection of pathogens and toxins and application of nanotechnology in ensuring food safety are also emphasized Key features Presents recent research development with applications Discusses new technology and processes in food process engineering Provides several chapters on candelilla which is frequently used as a food additive but can also be used in cosmetics drugs etc covering its characteristics common uses geographical distribution and more
