an introductory statistics book designed to provide scientists with practical information needed to apply the most common  
statistical tests to laboratory research data The book is designed to be practical and applicable so only minimal information is  
devoted to theory or equations Emphasis is placed on the underlying principles for effective data analysis and survey the  
statistical tests It is of special value for scientists who have access to Minitab software Examples are provides for all the  
statistical tests and explanation of the interpretation of these results presented with Minitab similar to results for any  
common software package The book is specifically designed to contribute to the AAPS series on advances in the  
pharmaceutical sciences It benefits professional scientists or graduate students who have not had a formal statistics class  
who had bad experiences in such classes or who just fear don t understand statistics Chapter 1 focuses on terminology and  
essential elements of statistical testing Statistics is often complicated by synonyms and this chapter established the terms  
used in the book and how rudiments interact to create statistical tests Chapter 2 discussed descriptive statistics that are used  
to organize and summarize sample results Chapter 3 discussed basic assumptions of probability characteristics of a normal  
distribution alternative approaches for non normal distributions and introduces the topic of making inferences about a larger  
population based on a small sample from that population Chapter 4 discussed hypothesis testing where computer output is  
interpreted and decisions are made regarding statistical significance This chapter also deal with the determination of  
appropriate sample sizes The next three chapters focus on tests that make decisions about a population base on a small  
subset of information Chapter 5 looks at statistical tests that evaluate where a significant difference exists In Chapter 6 the  
tests try to determine the extent and importance of relationships In contrast to fifth chapter Chapter 7 presents tests that  
evaluate the equivalence not the difference between levels being tested The last chapter deals with potential outlier or  
aberrant values and how to statistically determine if they should be removed from the sample data Each statistical test  
presented includes an example problem with the resultant software output and how to interpret the results Minimal time is  
spent on the mathematical calculations or theory For those interested in the associated equations supplemental figures are  
presented for each test with respective formulas In addition Appendix D presents the equations and proof for every output

result for the various examples. Examples and results from the appropriate statistical results are displayed using Minitab 18. In addition to the results, the required steps to analyze data using Minitab are presented with the examples for those having access to this software. Numerous other software packages are available including based data analysis with Excel.

**Specification of Drug Substances and Products** Christopher M. Riley, K. Lien Nguyen, 2024-09-22. Specification of Drug Substances and Drug Products is a fully comprehensive reference on Specification Setting for Pharmaceuticals. There have been several recent developments in the ICH Guidelines which were not captured in previous editions, notably the new guideline on Development of Analytical Procedure and the revisions to the validation guidelines and the specification guidelines. This edition contains chapters discussing the unique requirements for the universal critical quality attributes as well as the specific tests required to characterize and control different types of products ranging in complexity from small molecules in immediate release oral dosage forms to complex products such as drug antibody conjugates and mRNA based products. This substantially expanded revision of the 2nd edition will serve as practical comprehensive reference for scientists, managers, educators, and consultants involved in the development and regulation of pharmaceutical products. Presents critical assessment, potential impact, and application of the recent revisions to ICH guidelines on method validation Q2 as well as the latest guideline on Analytical Method Development Q14 and the special regional requirements in non-ICH regions. Addresses comprehensive treatment of the development and validation of analytical methodologies used in the analysis, control, and specification of a variety of different types of dosage forms ranging from traditional oral solid dosage forms to proteins, mRNA based drugs, vaccines, and gene therapy. This book will also address drug device combination products such as digital drug delivery systems, transdermal systems, and inhalation products. Presents detailed treatment of latest statistical approaches including new approaches to the treatment of validation data, method specification setting, and shelf life prediction based on stability data.

*Nature-Inspired Sensors* Hossam Haick, 2024-10-24. Nature Inspired Sensors presents and discusses the basic principles and latest developments in nature inspired sensing and biosensing materials as well as the design and mechanisms for analyzing their potential in multifunctional sensing applications. The book starts with a comprehensive review of certain fundamental mechanisms in different living creatures including humans, animals, and plants. It presents and discusses ways for imitating various nature inspired structural features and their functional properties such as hierarchical interlocked porous and bristle like structures and hetero layered brick and mortar structures. It also highlights the utility of these structures and their properties for sensing functions which include static coloration, self cleaning, adhesive, underwater navigation, and object detection, electric charge generation, and sensitive olfactory functions for detecting various substances. This is followed by an appraisal of accumulating knowledge and its translation from the laboratory to the point of care phase using selective sensors as well as desktop and wearable artificial sensing devices for example electronic noses and electronic skins in conjunction with AI assisted data processing and decision making in the targeted field of application. In addition, the

book offers an insight into the challenges of continuing the development of nature inspired smart sensing and biosensing technology and their wider availability which can be substantially improved It is a valuable reference for graduates undergraduates researchers and working professionals in the fields of chemistry materials science and biomedical and environmental science Discusses the current strategies for fabricating nature derived bio chemical sensors Presents ways to apply nature derived bio chemical sensors in real life Describes the future of nature derived bio chemical sensors
