Part Description: 5.8 GHz magnetron (used in GA4007A)
GAE Part Number: 911405 Rev: 2
Serial Number: 392750010
RMA Number: 1513

1.0 Problem Reported by Customer

From email dated 05-MAY-08: "Days ago we noticed that the generator did not sustain for more than a few minutes a power level of 500W. To-day again, at 500W, with a matched load (reflected power 20 W), the generator went off again, apparently switched off by the temperature sensor. Notice that air temperature in the lab was around 17°C."

From email dated 08-MAY-08: "Comparing with filament of the spare magnetron we bought from you, shows that indeed filament is open."

No failures of waveguide components were reported.

2.0 Description of Customer Equipment Configuration

None provided other than as indicated above. The microwave generator was delivered along with a 3-port circulator (model GA1108) and dummy load (model GA1221) which are typically used in an isolator configuration to protect the magnetron from reverse power.

3.0 Results of Inspection and Testing

The magnetron filament resistance was measured and found to be infinite, thus indicating an open circuit. Resistance between the anode and either filament lead was also found to be infinite for both.

Evidence of arcing inside waveguide at the magnetron antenna (photo 1). Vacuum seal broken at antenna (photo 2). No evidence of arcing along the length of the waveguide.

Photo 1

Photo 2

The magnetron was disassembled and internally inspected. Heavy oxidation was found on the anode vanes and straps (photos 3 and 4). No deformation of the anode or antenna structures was found.
