This book will be divided into two parts In the first part authors will explore and complicate what wildness means For example science writer Emma Marris argues that spontaneous vegetation and free roaming animals in cities actually possess more autonomy than the wolves or pines of Yellowstone biologist Jonathan Losos asks whether invasive species are necessarily detrimental and may even play a role in restoring ecosystems and psychologist Susan Clayton discusses new ways of experiencing nature particularly via technology and what the benefits and limitations may be In the second half of the book essays will reflect on the roles of naturalism natural history and nature education communication in helping us connect with wild species and landscapes at a time when many of those connections have frayed or even lost altogether
