Fricke,1975 Urban Stormwater Management in Developing Countries J. Parkinson,O. Mark,2005-09-30 The purpose of this book is to disseminate contemporary knowledge and practical experiences concerning problems and solutions related to urban hydrology and drainage Although the main focus is on developing countries the book draws from experiences in many other parts of the world Based upon numerous practical examples and case studies the book provides information to assist in the management planning and engineering design processes Urban Stormwater Management in Developing Countries covers a wide range of methods and approaches to improve the understanding and ability of local stakeholders to solve stormwater problems within the framework of integrated urban water management As well as structural interventions the book describes various non structural approaches for flood mitigation and pollution control This book encourages the reader to adopt an integrated approach towards stormwater management and considers the importance of institutional arrangements participation of local stakeholders in planning as well as aspects of financing and cost recovery This comprehensive and topical book Addresses the broad range of issues related to urban stormwater management with a specific focus on developing countries Covers the main aspects of planning design operation and maintenance of urban drainage systems as well as socio economic and institutional issues related to urban stormwater management Presents structural and non structural approaches for flood mitigation and pollution control within an integrated water resource management framework Provides extensive examples and case studies of best practice Contents Urbanisation and urban hydrology Impacts of flooding on society Integrated framework for stormwater management Institutional structures and policies Planning for urban stormwater management Approaches to urban drainage system design Ecological approaches to urban drainage system design Applications of computer models Operational performance and maintenance Flood mitigation and response strategies Participation and partnerships Economics and financing Full Contents List 27KB *Urban Stormwater Management Manual for Malaysia: Property drainage and inlet* ,2000 *Drain for Gain: Making Water Management Worth its Salt* Henk Ritzema,2026-02-02 Salinity affects 10 to 16% of all irrigated lands while the annual rate of land loss due to waterlogging and salinity is about 0.5 million hectares per year In this dissertation the role of subsurface drainage to reduce these problems in irrigated agriculture in arid and semi arid regions has been analysed and challenges for improving subsurface drainage practices have been formulated Although the installed subsurface drainage systems are in general technically sound and cost effective drainage development lags behind irrigation development and consequently a substantial part of the irrigated areas suffers from waterlogging and salinity This is mainly because the subsurface drainage systems are designed and implemented by government with the users the small farmers having little responsibility and having little input In the adopted top down approach the location specific conditions and

farmers preferences are hardly taken into consideration Furthermore the emphasis has been on the technical aspects the physical infrastructure while the organizational aspects institutional infrastructure have been largely neglected To reverse the negative trend in salt build up and waterlogging in irrigated lands in semi arid and arid regions a number of challenges for enhancing the role of subsurface drainage have been formulated i balancing top down against bottom up ii from
