Student Exploration: Ionic Bonds

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: chemical family, electron affinity, ion, ionic bond, metal, nonmetal, octet rule, shell, valence electron

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Nate and Clara are drawing pictures with markers. There are 8 markers in a set. Nate has 9 markers and Clara has 7. What can Nate and Clara do so that each of them has a full set?

2. Maggie is sitting at a table with Fred and Florence. Maggie has 10 markers, but Fred and Florence each have only 7 markers. How can they share markers so each has 8?

Gizmo Warm-up

Just like students sharing markers, atoms sometimes share or swap electrons. By doing this, atoms form bonds. The *Ionic Bonds* Gizmo allows you to explore how **ionic bonds** form.

To begin, check that **Sodium (Na)** and **Chlorine (Cl)** are selected from the menus at right. Click **Play** (▶) to see electrons orbiting the nucleus of each atom. (Note: These atom models are simplified and not meant to be realistic.)

1. Each atom consists of a central nucleus and several **shells** that contain electrons. The outermost electrons are called **valence electrons**.

How many valence electrons does each atom have? Sodium: Chlorine:

2. Click **Pause** (⏸). Elements can be classified as **metals** and **nonmetals**. Metals do not hold on to their valence electrons very tightly, while nonmetals hold their electrons tightly. **Electron affinity** is a measure of how tightly the valence electrons are held.

- A. Try pulling an electron away from each atom. Based on this experiment, which atom is a metal?

Which is a nonmetal?

- B. Try moving an electron from the metal to the nonmetal. What happens?

Exploring Chemistry (Loose-Leaf) Matthew Johll, 2012-05-04 Matthew Johll's *Exploring Chemistry* covers the standard topics for the nonmajors course in the typical order but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real life situations. For example, students work through the often difficult topics of molecular structure, gas laws, and organic chemistry by learning about the development of powerful new chemotherapy drugs, new technologies for screening airline passengers, and the creation of biodegradable biopolymers. It's the same case-driven approach that Johll uses in his acclaimed *Investigating Chemistry*, now in its Third Edition, but *Exploring Chemistry* goes beyond the other book's specific focus on examples from forensic science to use real life stories from cooking, athletics, genetics, green chemistry, and more.

Chemical Pedagogy Keith S. Taber, 2024-12-20 How should chemistry be taught in schools, colleges, and universities? *Chemical Pedagogy* discusses teaching approaches and techniques, the reasoning behind them, and the evidence for their effectiveness. The book surveys a wide range of different pedagogic strategies and tactics that have been recommended to better engage learners and provide more effective chemistry teaching. These accounts are supported by an initial introduction to some key ideas and debates about pedagogy, the science of teaching. *Chemical Pedagogy* discusses how teaching innovations can be tested to inform research-based practice. Through this book, the author explores the challenges of carrying out valid experimental studies in education and the impediments to generalising study results to diverse teaching and learning contexts. As a result, the author highlights both the need to read published studies critically and the value of teachers and lecturers testing out recommended innovations in their own classrooms. *Chemical Pedagogy* introduces core principles from research into human cognition and learning to provide a theoretical perspective on how to best teach for engagement and understanding. An examination of some of the more contentious debates about pedagogy leads to the advice to seek optimally guided instruction, which balances the challenge offered to learners with the level of support provided. This provides a framework for discussing a wide range of teaching approaches and techniques that have been recommended to those teaching chemistry across educational levels, including both those intended to replace teaching from the front and others that can be built into traditional lecture courses to enhance the learning experience.

Discover Science: Teacher's annotated edition, 1991 Science content helps develop the skills needed to understand how science works, learn new concepts, solve problems, and make decisions in today's technological society. **Powerful Ideas of Science and How to Teach Them** Jasper Green, 2020-07-19 A bullet dropped and a bullet fired from a gun will reach the ground at the same time. Plants get the majority of their mass from the air around them, not the soil beneath them. A smartphone is made from more elements than you. Every day, science teachers get the opportunity to blow students' minds with counter-intuitive, crazy ideas like these. But getting students to understand and remember the science that explains these observations is complex. To help, this book explores how to plan and teach science lessons so that students and teachers are

thinking about the right things that is the scientific ideas themselves It introduces you to 13 powerful ideas of science that have the ability to transform how young people see themselves and the world around them Each chapter tells the story of one powerful idea and how to teach it alongside examples and non examples from biology chemistry and physics to show what great science teaching might look like and why Drawing on evidence about how students learn from cognitive science and research from science education the book takes you on a journey of how to plan and teach science lessons so students acquire scientific ideas in meaningful ways Emphasising the important relationship between curriculum pedagogy and the subject itself this exciting book will help you teach in a way that captivates and motivates students allowing them to share in the delight and wonder of the explanatory power of science

[Affective Dimensions in Chemistry Education](#) Murat Kahveci, MaryKay Orgill, 2015-01-08 This is a unique resource for those wishing to address the affective domain as they research and solve problems in chemistry education Contributions by world leading experts cover both fundamental considerations and practical case studies This work fills a gap in the literature of chemistry education which so far has focussed mainly on the cognitive domain The affective domain refers to feelings based constructs such as attitudes values beliefs opinions emotions interests motivation and a degree of acceptance or rejection It can affect students interest in science topics and their motivation to persevere in learning science concepts
