Ancients Shand Stringham,2016-03-24 Six months ago Colonel Barton Stauffer retired from activity duty to spend more time with his family Now he has been reactivated and assigned to lead a team of time travelers in a top secret research facility buried deep beneath Carlisle Barracks to survey the ancient prehistoric past stretching into antediluvian times a period for which there are no written records Our understanding of this time period is based entirely on conjecture flavored by legend mythology oral history and misunderstood archaeological activityand Stauffers team is out to find hard facts The history of humanity is inextricably intertwined with our religious experience and tradition What lies hidden or lost in the prehistoric past shrouds the truth about mans ancient origins but extensive cities built of intricately carved monolithic stones prove the existence of early and extraordinarily advanced technologies As Stauffer leads his team in search of proof of the great flood

and of the legendary Hall of Records hostile forces attempt to obliterate all evidence of humankind's ancient past and only Stauffer and his team can stop them. The Ancients is the third book in the Barton Stauffer time travel trilogy which began with Gettysburg Revisited and History Quest. In this third volume Stauffer leads an elite team of time travelers and antiquarians who are tasked with protecting humanity's ancient historical record and keeping the repository of antediluvian artifacts of humanity's mysterious past safe from those who wish to destroy them, bringing to a dramatic conclusion the saga of mankind's exploration of the past using temporal technology.

Duetting and Turn-Taking Patterns of Singing Mammals: From Genes to Vocal Plasticity, and Beyond Patrice Adret, Dena Jane Clink, Charles T. Snowdon, Sofya Dolotovskaya, 2023-10-23

Mammalian vocal duets and turn taking exchanges (long coordinated acoustic signals exchanged between two individuals) are primarily found in family living pair bonded mammals with a socially monogamous lifestyle: some rodents, some lemurs, tarsiers, titi monkeys, a Mentawai langur, gibbons, and siamangs. Duetting and turn taking patterns combine visual, chemical, tactile, and auditory cues to produce some of the most exuberant displays in the realm of animal communication. How and why such phenotypes evolved independently across main lineages are fundamental questions at the core of the nature nurture debate. Duetting styles ranging from antiphonal non overlapping to simultaneous overlapping emissions have now been documented in various taxa, some of which are quite reminiscent of turn taking rules in human conversation. Nonetheless, much remains to be learned about this complex motor skill and at all four levels of analysis: namely 1 developmental processes, 2 causal mechanisms, 3 functional properties, and 4 evolutionary history. Given the strong link between this form of coordinated singing and pair bonding, gaining a deeper understanding of this kind of cooperative behavior will likely shed more light on the deep evolutionary roots of human culture, language, and music.
