Sewage Treatment Plants Katerina Stamatelatou, Konstantinos P. Tsagarakis, 2015-05-15 **Sewage Treatment Plants Economic Evaluation of Innovative Technologies for Energy Efficiency** aims to show how cost saving can be achieved in sewage treatment plants through implementation of novel energy efficient technologies or modification of the conventional energy demanding treatment facilities towards the concept of energy streamlining The book brings together knowledge from Engineering Economics

Utility Management and Practice and helps to provide a better understanding of the real economic value with methodologies and practices about innovative energy technologies and policies in sewage treatment plants Vibrant Architecture Rachel Armstrong,2015-08-17 This book sets out the conditions under which the need for a new approach to the production of architecture in the twenty first century is established where our homes and cities are facing increasing pressures from environmental challenges that are compromising our lives and well being Vibrant architecture embodies a new kind of architectural design practice that explores how lively materials or vibrant matter may be incorporated into our buildings to confer on them some of the properties of living things such as movement growth sensitivity and self repair The theoretical and practical implications of how this may occur are explored through the application of a new group of materials Characteristically these substances possess some of the properties of living systems but may not have the full status of being truly alive They include forms of chemical artificial life such as dynamic droplets or synthetically produced soils As complex systems they are able to communicate directly with the natural world using a shared language of chemistry and so negotiate their continued survival in a restless world Vibrant architecture may create new opportunities for architectural design practice that venture beyond top down form finding programs by enabling architects to co design in partnership with human and nonhuman collectives which result from the production of post natural landscapes Ultimately vibrant architecture may operate as an ecological platform for human development that augments the liveliness of our planet rather than diminishes it
