Predictive Tools for Membrane Ageing Pierre LeClech,2014-03-15 This study increases our current understanding on the degradation ageing mechanisms occurring on porous membranes used in the water and wastewater industries Accelerated membrane degradation was obtained through both static and consecutive ageing protocols on the pilot scale and a range of carefully selected characterisation and analytical techniques was used to characterise the nascent changes faced by the membrane material The report covers four interrelated sections Critical assessment of characterisation techniques Static accelerated ageing Consecutive accelerated ageing Consecutive ageing of industrially aged membranes This final report

summarises the aims objectives outcomes and limitations of the individual work packages along with some recommendations for future work This book is co published with Water Research Australia
