Gens Cornes Et Crocs

Pablo Vidal González

Gens Cornes Et Crocs:

Faces of the Wolf Bernard Charlier, 2015-03-31 In his study of the human non human relationships in Mongolia Bernard Charlier explores the role of the wolf in the ways nomadic herders relate to their natural environment and to themselves The wolf as the enemy of the herds and a prestigious prey is at the core of two technical relationships herding and hunting endowed with particular cosmological ideas The study of these relationships casts a new light on the ways herders perceive and relate to domestic and wild animals It convincingly undermines any attempt to consider humans and non humans as entities belonging a priori to autonomous spheres of existence which would reify the nature society boundary into a phenomenal order of things and so justify the identity of western epistemology

Wolf Conflicts Ketil Skogen, Olve Krange, Helene Figari, 2017-05-01 Wolf populations have recently made a comeback in Northern Europe and North America These large carnivores can cause predictable conflicts by preying on livestock and competing with hunters for game But their arrivals often become deeply embedded in more general societal tensions which arise alongside processes of social change that put considerable pressure on rural communities and on the rural working class in particular Based on research and case studies conducted in Norway **Wolf Conflicts** discusses various aspects of this complex picture including conflicts over land use and conservation and more general patterns of hegemony and resistance in modern societies

Environmental Changes Céline Granjou, 2016-02-20 This book addresses environmental changes and how they reconfigure society's relationship to the future It argues that Man does not build his future alone instead environmental changes are also proof of the future making capacity of non human beings The author elaborates on the notion of the futures of Nature by drawing on theoretical contributions by recent ground breaking literature in the field of environmental humanities The book also builds on a sociological investigation into the practices implemented by environmental scientists experts and managers confronted with environmental changes Thinking of nature in terms of its futures requires us to overcome the rooted philosophical tradition that associates nature with permanence and society with creative change This is a daunting task which can only be successful if we look beyond the long lasting influence of the human centered categories of innovation development and civilization that social sciences have themselves contributed to coining We need to consider the active capacities of change and transformation of living beings and matter itself This book is of academic interest but is also for managers in different fields and areas affected by environmental changes Featuring a focus on the notion of future and the aim to locate an approach for the future in sociology Elaborates on the notion of more than human futures drawing on S Whatmore's words Offers grounded and detailed insights into three case study examples

Biosecurity Andrew Dobson, Kezia Barker, Sarah L. Taylor, 2013-08-15 Biosecurity is the assessment and management of potentially dangerous infectious diseases quarantined pests invasive alien species living modified organisms and biological weapons It is a holistic concept of direct relevance to the sustainability of agriculture food safety and the protection of human populations including bio terrorism the environment

and biodiversity Biosecurity is a relatively new concept that has become increasingly prevalent in academic policy and media circles and needs a more comprehensive and inter disciplinary approach to take into account mobility globalisation and climate change In this introductory volume biosecurity is presented as a governance approach to a set of concerns that span the protection of indigenous biological organisms agricultural systems and human health from invasive pests and diseases It describes the ways in which biosecurity is understood and theorized in different subject disciplines including anthropology political theory ecology geography and environmental management It examines the different scientific and knowledge practices connected to biosecurity governance including legal regimes ecology risk management and alternative knowledges The geopolitics of biosecurity is considered in terms of health biopolitics and trade governance at the global scale Finally biosecurity as an approach to actively secure the future is assessed in the context of future risk and uncertainties such as globalization and climate change

The Ashgate Research Companion to Planning Theory Patsy Healey, 2016-11-03 At a time of potentially radical changes in the ways in which humans interact with their environments through financial environmental and or social crises the raison d'être of spatial planning faces significant conceptual and empirical challenges This Companion presents a multidimensional collection of critical narratives of conceptual challenges for spatial planning The authors draw on various disciplinary traditions and theoretical frames to explore different ways of conceptualising spatial planning and the challenges it faces Through problematising planning itself the values which underpin planning and theory practice relations contributions make visible the limits of established planning theories and illustrate how by thinking about new issues or about issues in new ways spatial planning might be advanced both theoretically and practically There cannot be definitive answers to the conceptual challenges posed but the authors in this collection provoke critical questions and debates over important issues for spatial planning and its future A key question is not so much what planning theory is but what might planning theory do in times of uncertainty and complexity An underlying rationale is that planning theory and practice are intrinsically connected The Companion is presented in three linked parts issues which arise from an interactive understanding of the relations between planning ideas and the political institutional contexts in which such ideas are put to work key concepts in current theorising from mainly poststructuralist perspectives and what discussion on complexity may offer planning theory and practice

L'animal sauvage entre nuisance et patrimoine Émilie-Anne Pépy, Julien Alleau, 2009 Dans un contexte social et médiatique largement ouvert sur les thématiques et problématiques environnementales l'animal sauvage s'invite dans les débats humains. Objet de discussions passionnées de la part des scientifiques, des naturalistes et des collègues professionnels aussi bien qu'amateurs il a désormais acquis droit de cité dans les travaux des sciences humaines et sociales. Dans leur diversité les animaux non domestiques ont parfois été redoutés ou chassés pour procurer des ressources indispensables à la vie humaine. Le contemporain a commencé à brouiller les frontières que l'on croyait solidement établies entre différents statuts accordés aux animaux. Certaines espèces sont désormais considérées comme victimes de l'action humaine dans un contexte d'inquiétude grandissante face aux dégradations réelles ou supposées commises par les hommes à l'encontre des écosystèmes. Des animaux emblématiques tels le ours et le loup font l'objet de mesures de protection ou de restauration le brouillage des frontières entre nature et culture domestique et sauvage tant illustré par l'artificialisation d'espaces et d'espèces que l'on voudrait maintenir sauvages. De este modo asume la pretensión de dar qué pensar sobre algunos de los retos de carácter epistemológico con los que nos encaran las actuales movilidades y alteraciones sociales y en particular aquellas que hacen referencia a las migraciones transnacionales. El deseo que ha guiado en consecuencia su elaboración ha sido el de poner en obra y propiciar la interrogación sobre los supuestos o fundamentos científicos el por qué se estudia lo que se estudia y la forma en que se hace las estrategias de producción de información a las cuales se recurre las categorías nociones y términos de los que se hace uso en las observaciones y conceptualizaciones y en definitiva las implicaciones o los efectos que todos estos *Histoire du méchant loup* Jean-Marc Moriceau, 2007 Synthèse sur le loup et son rapport aux hommes de la guerre de Cent Ans la Première Guerre mondiale qui tente de montrer travers des documents des témoignages etc comment les attaques de cet animal ont pris une connotation négative que se pose encore aujourd'hui le problème de sa cohabitation avec l'homme Memento *Annales de géographie* ,2008 **Le Monde alpin et rhodanien** ,2002 Les mondes agricoles en politique Bertrand Hervieu, 2010 Des chercheurs analysent les transformations de la profession d
